

## Usage of ICT tools in the class room

The use of PowerPoint presentations (PPTs) and YouTube videos in history classrooms enhances learning by making historical events more engaging and visually appealing. PPTs present information in a structured manner, incorporating images, maps, timelines, and bullet points to highlight key events and concepts. This visual aid helps students retain information better than traditional lectures alone. Additionally, YouTube videos bring history to life through documentaries, animated explanations, and reenactments of historical events. These videos allow students to see historical figures in action and understand the context of different time periods. Such tools make history more accessible to both visual and auditory learners. Moreover, the use of multimedia encourages class discussions and critical thinking, as students analyze historical events from multiple perspectives. Integrating ICT tools into history lessons makes learning more interactive, helping students develop a deeper understanding and appreciation of the past.
