**2018-2019**

## **DECLARATION**

We here by declare that the project work entitled “Online Library System” Submitted to the A.S.D.GOV.T. DEGREE COLLEGE FOR WOMEN(A), KAKINADA, is a record of an original work done by us under The guidance of Mrs. N.Naga Subrahmanyeswari Head of the Dept of Computer Science and this project work is submitted in the partial fulfillment of the requirements for the award of degree of B.Sc(Computer Science). The result embodied in the thesis have not been submitted to any other University of Institute for the award of any degree of diploma.

## **ACKNOWLEDGEMENT**

We are thankful to our Principal, Dr.D. Ratnagiri Usha M.A., M.Phil, Ph.D for her permission to select this project and for her continuous encouragement and valuable suggestions.

We are also thankful to our Head of the Department and Project Guide Smt. N.Naga Subrahmanyeswari, M.Tech(Ph.D) for her continuous and constant motivation towards completion of this project.

We wish to express our gratitude to our faculty Smt. G.Satya Suneetha M.Tech(Ph.D) for her timely suggestions and encouragement.

**A.S.D GOVT DEGREE COLLEGE FOR WOMEN (A), KAKINADA  
DEPARTMENT OF COMPUTER SCIENCE**

***CERTIFICATE***

This is to certify that the Project on “ONLINE LIBRARY ” was taken up by students of III B.Sc(Computer Science) under the able guidance of Mrs. N.Naga Subrahmanyeswari, Department of Computer Science, **A.S.D GOVT DEGREE COLLEGE FOR WOMEN (A)**, Jagannaickpur, Kakinada. The project work is completed in a systematic way.

## CHAPTER ONE

### INTRODUCTION

#### 1.1 Background of Study

An **online-library** is a special library with a focused collection of digital objects that can include text, visual material, audio material, video material, stored as electronic media formats (as opposed to print, microform, or other media), along with means for organizing, storing, and retrieving the files and media contained in the library collection. Digital libraries can vary immensely in size and scope, and can be maintained by individuals, organizations, or affiliated with established physical library buildings or institutions, or with academic institutions. The digital content may be stored locally, or accessed remotely via computer networks. An electronic library is a type of information retrieval system. Early projects centered on the creation of an electronic card catalogue known as Online Public Access Catalog (OPAC). By the 1980s, the success of these endeavors resulted in OPAC replacing the traditional card catalog in many academic, public and special libraries. This permitted libraries to undertake additional rewarding co-operative efforts to support resource sharing and expand access to library materials beyond an individual library.

An early example of a digital library is the Education Resources Information Center (**ERIC**) which was "born digital" in 1966. Many academic libraries are actively involved in building institutional repositories of the institution's books, papers, thesis, and other works which can be digitized or were 'born digital'. Many of these repositories are made available to the general public with few restrictions, in accordance with the goals of open access, in contrast to the publication of research in commercial journals, where the publishers often limit access rights.

Online - Library Management System is an application which refers to library systems which are generally small or medium in size. It is used by librarian to manage the library using a computerized system where he/she can record various transactions like issue of books, return of books, addition of new books, addition of new students etc.

Books and student maintenance modules are also included in this system which would keep track of the students using the library and also a detailed description about the books a library contains. With this computerized system there will be no loss of book record or member record which generally happens when a non-computerized system is used. In addition, report module is also included in Library Management System. If user's position is admin, the user is able to generate different kinds of reports like lists of students registered, list of books, issue and return reports. All these modules are able to help librarian to manage the library with more convenience and in a more efficient way as compared to library systems which are not computerized.

#### 1.2 Statement of Problem

The library information is to an extent manually recorded and reveals a number of problems.

- The recording of students that borrow some books for further reading is done manually on a book that appears rough. Thus, the books are exposed to physical damage, information can be lost and dust particles are accumulated.
- It also takes a lot of time to arrange these books in its serial number and moreover the book keepers always felt tired while arranging these books.
- These books which are kept in the library can easily be exposed to insect and other physical damages. Like; Fire, Water and Ants, etc.

#### 1.3 Aim and Objectives of the Study

The project aim and objectives that will be achieved after completion of this project are discussed in this subchapter. The aim and objectives are as follows:

##### (A) Aim

- Online book issue

- Request column for librarian for providing new books
- A separate column for digital library
- Student login page where student can find books issued by him/her and date of return.

**(B) Objective:**

- A search column to search availability of books
- A teacher login page where teacher can add any events being organized in the college and important suggestions regarding books.
- Online notice board about the workshop.

**1.4 Significance of the Study**

This platform showcases information to the society without any stress:

- Improve Access
- Wider Access
- Improve Information Sharing

**1.4.1 Improve Access**

Connect patrons with the information they seek with these promising electronic tools! Improved Access to Information: Portals, Content Selection, and Digital Information focuses on how you can improve access to information using electronic reference resources.

The product of the National Open University of Nigeria Libraries, Improved Access to Information offers library administrators new approaches for overcoming the proliferation of electronic information and making it readily available to students. This project will help you provide essential understanding to student and secure their patron base.

**1.4.2 Wider Access**

In the case of wider access, this expresses the evolution of transporting information through an online video tutorial, voice recommendation, and online library. Most times student do value this platform, because of its more accessibility to their various courses.

On like National Open University of Nigeria previous portal has this easy navigation for an online test known as (**I-Learn**). This platform known as (**I-Learn**) has been of good help to the students, in order to read their books and download some tutor mark assessment materials.

**1.4.3 Improve Information Sharing**

Sharing of information through online-library has been a multi-purpose and strategy for student to have a standard impact to their studies. In fact this methodology has been the best for students, both in the aspect of distance-learning and nearby centres. This pattern has innovated a style that grants the students a free access to share and save their leisure time in reading their books online. This online library has also helped the society to profound and understand the importance of reading mostly online.

**1.5 Scope of the Study**

The scope of this study covers the online-library as a whole, and its flexibility for students and society to read online.

**1.6 Limitation of the Study**

This project was constrained by the following factors:

**(a) Financial Constraints**

Bearing in mind the economic situation of the nation, it was found difficult in making both ends meet, because of the exorbitant nature of things nowadays in travelling for the collection of data needed for the project.

### **(b) Time Constraints**

Looking at the interval between the resumption and vacation of the final semester for the project to be completed, the time given seemed to be short for the collection of required information for better work to be done.

### **(c) Non-Availability of Material**

During this project, it was noticed that the required materials needed for the project are not documented. Those that were documented lacked storage facilities where they can be reached.

### **1.7 Definition of Technical terms**

- ❖ **BROAD ACCESS:** this expresses the evolution of transporting information through an online video tutorial, voice recommendation, and online library. Most times student do value this platform, because of its more accessibility to their various courses and video tutorials.
- ❖ **PORTABILITY:** this platform (online library) is been organize in a way that will benefit the student and as well the society, more especially whenever the fill like surfing the internet for more educative instruction.

## **CHAPTER TWO LITERATURE REVIEW**

### **2.1 Overview of Library Information System**

Library is regarded as the brain of any institution of learning, of course many institutions understand the importance of the library to the growth of the institution and their esteem users which we categorically call the students. An integrated library system, also known as a library management system (Adamson et al., 2008) is an enterprise resource planning system for a library, used to track items owned, orders made, bills paid, and users who have borrowed.

The Online-Library Information System is an Online-Library platform mostly used for monitoring and controlling the transactions in a library (Ashutosh & Ashish, 2012). Online-Library Information System supports the general requirement of the library such as the acquisition, cataloguing, circulation and other sections.

Before the advent of computer in modern age there are different methods of keeping records in the library. Records are kept in the library on shelves and each shelf are labelled in an alphabetical or numerical order, in which the categories of books available are arranged on different position on the shelves and as well are recorded on the library manuscript and when any book is to be referenced the manuscript is being referred to, to know the position of such required book by the person that requested for the book. After the invention of computer different researchers have carried out various approach on an automated library management system in which this project is as well all about.

The first library management system to be reviewed is the KOHA library management system. Since the original implementation in 1999, KOHA functionality has been adopted by thousands of libraries worldwide, each adding features and functions, deepening the capability of the system.

With the 3.0 release in 2005, and the integration of the powerful Zebra indexing engine, KOHA became a viable, scalable solution for libraries of all kinds.

LibLime KOHA is built on this foundation. With its advanced feature set, LibLime KOHA is the most functionally advanced open source Integrated Library System in the market today.

The major setback of this Library Management System is that it is a web based and as a result it is not security conscious because hackers could have the database hacked and access or modify the information of such user.

Another Online-Library Information System is the Capital's library software with the following benefits Increases support available for staff and users in any modern library service, provides efficiency, innovative system that's saves library time and improves the user experience.

An Online-library information system usually comprises a relational database, software to interact with that database, and two graphical user interfaces (one for users, one for staff). Most integrated library systems, separate software functions into discrete programs called modules, each of them integrated with a unified interface.

Johnson, (2007) viewed library and information science education in developing countries.

He concluded that LIS programs in developing countries continue to suffer from lack of financial support by governments.

Rahman, Khatun & Islam, (2008) reviewed the library education in Bangladesh. The study found that majority of institutions in Bangladesh do not have well-equipped computer labs or sufficient numbers of computers for students. A sufficient number of classification and cataloguing tools (DDC, LC, Sears list of subject headings for practical were not present.

Many institutions either have no library or inadequate collection of textbooks. Professional's status was also found very low, low pay scale and limited opportunities for promotion.

In Nepal, Siwakoti, (2008) found that there was no government agency to control, monitor and evaluate the school libraries activities. There was lack of awareness programs, budgetary constraints, inadequate space, inadequate library materials, lack of trained and skilled manpower and lack of appropriate government policy and lack of information literacy.

Ademodi & Adepoju, (2009) investigated the computer skill among librarians in academic libraries on Ondo and Ekiti State in Nigeria. It was found the shortage of computers and computer skills among professionals. The study recommended that more attention and funds should be provided for training and procurement of ICT infrastructure in Nigerian University libraries. For computerization purpose, library administration should solicit funds and assistant from foreign agencies and foundations who are interested for the cause.

## **2.2 Software Requirement Specification**

### **2.2.1 General Description**

Product Description:

An Online-Library Information System is a computerized system which helps user (librarian) to manage the library daily activity in electronic format. It reduces the risk of paper work such as file lost, file damaged and time consuming.

It can help user to manage the transaction or record more effectively and time-saving.

#### **Problem Statement:**

The problem occurred before having computerized system includes:

- File lost
- When computerized system is not implemented file is always lost because of human environment. Sometimes due to some human error there may be a loss of records.
- File damaged when a computerized system is not there file is always lost due to some accident like spilling of water by some member on file accidentally. Besides some natural disaster like floods or fires may also damage the files.
  
- Difficult to search record
- When there is no computerized system there is always a difficulty in searching of records if the records are large in number.
- Space consuming

- After the number of records become large the space for physical storage of file and records also increases if no computerized system is implemented.
- Cost consuming
- As there is no computerized system to add each record, paper will be needed which will increase the cost for the management of library.

### **2.2.2 System Objectives**

- Improvement in control and performance
- The system is developed to cope up with the current issues and problems of library .The system can add user, validate user and is also bug free.
- Save cost
- After computerized system is implemented less human force will be required to maintain the library thus reducing the overall cost.
- Save time
- Librarian is able to search record by using few clicks of mouse and few search keywords thus saving his valuable time.
- Option of online Notice board
- Librarian will be able to provide a detailed description of workshops going in the college as well as in nearby colleges
- Lecture Notes
- Teacher have a facility to upload lectures notes in a pdf file having size not more than 10mb

### **2.2.3 System Requirements**

#### **2.2.3.1 Non Functional Requirements**

##### **Product Requirements**

##### **Efficiency Requirement**

When a library management system will be implemented librarian and user will easily access library as searching and book transaction will be very faster.

##### **Reliability Requirement**

The system should accurately performs member registration, member validation, report generation, book transaction and search

##### **Usability Requirement**

The system is designed for a user friendly environment so that student and staff of library can perform the various tasks easily and in an effective way.

##### **Organizational Requirement**

##### **Implementation Requirements**

In implementing whole system it uses html in front end with php as server side scripting language which will be used for database connectivity and the backend i.e. the database part is developed using MySQL.

##### **Delivery Requirements**

The whole system is expected to be delivered in six months of time with a weekly evaluation by the project guide.

#### **2.2.3.2 Functional Requirements**

##### **1. Normal User**

##### **1.1 User Login**

##### **Description of feature**

This feature used by the user to login into system. They are required to enter user id and password before they are allowed to enter the system .The user id and password will be verified and if invalid id is there user is allowed to not enter the system.

#### **Functional requirements**

- user id is provided when they register
- The system must only allow user with valid id and password to enter the system
- The system performs authorization process which decides what user level can access to.
- The user must be able to logout after they finished using system.

#### **2.2.3.3 Register New User**

Description of feature

This feature can be performed by all users to register new user to create account.

#### **Functional requirements**

- System must be able to verify information
- System must be able to delete information if information is wrong

#### **2.2.3.4 Register New Book**

Description of feature

This feature allows to add new books to the library

#### **Functional requirements**

- System must be able to verify information
- System must be able to enter number of copies into table.
- System must be able to not allow two books having same book id.

#### **2.2.3.5 Search Book**

Description of Feature

This feature is found in book maintenance part. We can search book based on book id, book name, publication or by author name.

#### **Functional requirements**

- System must be able to search the database based on select search type
- System must be able to filter book based on keyword entered
- System must be able to show the filtered book in table view

#### **2.2.3.6 Issue Books and Return Books**

Description of Feature

This feature allows to issue and return books and also view reports of book issued.

#### **Functional requirements**

- System must be able to enter issue information in database.
- System must be able to update number of books.
- System must be able to search if book is available or not before issuing books
- System should be able to enter issue and return date information

#### **2.2.3.7 Event Addition**

Description of Feature

This feature allows teacher and student to add information about various workshops being conducted in college and colleges nearby.

#### **Functional requirements**

- System should be able to add detailed information about events.
- System should be able to display information on notice board available in the homepage of site

#### **2.2.4 Software and Hardware Requirements**

This section describes the software and hardware requirements of the system

#### **2.2.4.1 Software Requirements**

- Operating system- Windows 7 is used as the operating system as it is stable and supports more features and is more user friendly
- Database MYSQL-MYSQL is used as database as it easy to maintain and retrieve records by simple queries which are in English language which are easy to understand and easy to write.
- Development tools and Programming language- HTML is used to write the whole code and develop webpages with css, java script for styling work and php for sever side scripting.

#### **2.2.5.1 Hardware Requirements**

- Intel core i5 2nd generation(2G) in year 1950's was used as a processor because it is fast than other processors and it provide reliable and stable and we can run our pc for longtime. By using this processor we can keep on developing our project without any worries.
- Ram 1gb is used as it will provide fast reading and writing capabilities and will in turn support in processing

### **2.3 Existing Vs Proposed System**

- i. Existing system does not have any facility of teacher's login or student login whereas proposed system will have a facility of student login as well as teacher's login
- ii. Existing system does not have a facility of online reservation of books whereas proposed system has a facility of online reservation of books
- iii. Existing system does not have any facility of online notice board where description of workshops happening in our college as well as nearby colleges is being provided.
- iv. Existing system does not has any option of lectures notes uploaded by teachers whereas proposed system will have this facility
- v. Existing system does not have any facility to generate student reports as well book issue reports whereas proposed system provides librarian with a tool to generate reports
- vi. Existing system does not has any facility for book request and suggestions where as in proposed system after logging in to their accounts student can request books as well as provide suggestions to improve library

#### **2.3.1 Software Tools Used**

The whole Project is divided in two parts the front end and the back end.

#### **2.3.2 Front end**

The front end is designed using html,Php,css, Java script

#### **HTML- HTML or Hyper Text Markup Language:**

This is the main markup language for creating web pages and other information that can be displayed in a web browser.HTML is written in the form of HTML elements consisting of *tags* enclosed in angle brackets (like <html>), within the web page content. HTML tags most commonly come in pairs like <h1> and </h1>, although some tags represent *empty elements* and so are unpaired, for example <img>. The first tag in a pair is the *start tag*, and the second tag is the *end tag* (they are also called *opening tags* and *closing tags*). In between these tags web designers can add text, further tags, comments and other types of text-based content.

The purpose of a web browser is to read HTML documents and compose them into visible or audible web pages. The browser does not display the HTML tags, but uses the tags to interpret the content of the page.HTML elements form the building blocks of all websites. HTML allows images and objects to be embedded and can be used to create interactive forms. It provides a means to create structured documents by denoting structural semantics for text such as headings, paragraphs, lists, links, quotes and other items. It can embed scripts written in languages such as JavaScript which affect the behavior of HTML web pages.

**CSS- Cascading Style Sheets (CSS):** is a style sheet language used for describing the look and formatting of a document written in a markup language. While most often used to style web pages and interfaces written in HTML and XHTML, the language can be applied to any kind of XML document, including plain XML, SVG and XUL. CSS is a cornerstone specification of the web and almost all web pages use CSS style sheets to describe their presentation. CSS is designed primarily to enable the separation of document content from document presentation, including elements such as the layout, colors, and fonts. This separation can improve content accessibility, provide more flexibility and control in the specification of presentation characteristics, enable multiple pages to share formatting, and reduce complexity and repetition in the structural content (such as by allowing for table less web design). CSS can also allow the same markup page to be presented in different styles for different rendering methods, such as on-screen, in print, by voice (when read out by a speech-based browser or screen reader) and on Braille-based, tactile devices. It can also be used to allow the web page to display differently depending on the screen size or device on which it is being viewed. While the author of a document typically links that document to a CSS file, readers can use a different style sheet, perhaps one on their own computer, to override the one the author has specified. However if the author or the reader did not link the document to a specific style sheet the default style of the browser will be applied. CSS specifies a priority scheme to determine which style rules apply if more than one rule matches against a particular element. In this so-called *cascade*, priorities or *weights* are calculated and assigned to rules, so that the results are predictable.

**JAVA SCRIPT- JavaScript (JS):** is a dynamic computer programming language. It is most commonly used as part of web browsers, whose implementations allow client-side scripts to interact with the user, control the browser, communicate asynchronously, and alter the document content that is displayed. It is also being used in server-side programming, game development and the creation of desktop and mobile applications. JavaScript is a prototype-based scripting language with dynamic typing and has first-class functions. Its syntax was influenced by C. JavaScript copies many names and naming conventions from Java, but the two languages are otherwise unrelated and have very different semantics. The key design principles within JavaScript are taken from the self and Scheme programming languages. It is a multi-paradigm language, supporting object-oriented, imperative, and functional programming styles. The application of JavaScript to use outside of web pages—for example, in PDF documents, site-specific browsers, and desktop widgets is also significant. Newer and faster JavaScript VMs and platforms built upon them (notably Node.js) have also increased the popularity of JavaScript for server-side web applications. On the client side, JavaScript was traditionally implemented as an interpreted language but just-in-time compilation is now performed by recent (post-2012) browsers.

**PHP- PHP:** is a server-side scripting language designed for web development but also used as a general-purpose programming language. PHP is now installed on more than 244 million websites and 2.1 million web servers.

Originally created by Rasmus Lerdorf in 1995, the reference implementation of PHP is now produced by The PHP Group. While PHP originally stood for *Personal Home Page*, it now stands for *PHP: Hypertext Preprocessor*, a recursive acronym. PHP code is interpreted by a web server with a PHP processor module, which generates the resulting web page: PHP commands can be embedded directly into an HTML source document rather than calling an external file to process data. It has also evolved to include a command-line interface capability and can be used in standalone graphical applications. PHP is free software released under the PHP License. PHP can be deployed on most web servers and also as a standalone shell on almost every operating system and platform, free of charge.

### **2.3.2 Back End**

The back end is designed using mysql which is used to design the databases MySQL- **MySQL** ("My S-Q-L", officially, but also called "My Sequel") is (as of July 2013) the world's second most widely

used open-source relational database management system (RDBMS). It is named after co-founder Michael Widenius daughter, my. The SQL phrase stands for Structured Query Language. The MySQL development project has made its source code available under the terms of the GNU General Public License, as well as under a variety of proprietary agreements. MySQL was owned and sponsored by a single for-profit firm, the Swedish company MySQL AB, now owned by Oracle Corporation .MySQL is a popular choice of database for use in web applications, and is a central component of the widely used LAMP open source web application software stack (and other 'AMP' stacks). LAMP is an acronym for "Linux, Apache, MySQL, Perl/PHP/Python." Free-software-open source projects that require a full-featured database management system often use MySQL. For commercial use, several paid editions are available, and offer additional functionality. Applications which use MySQL databases Include: TYPO3, MODx, Joomla, WordPress, phpBB, MyBB, Drupal and other software. MySQL is also used in many high-profile, large-scale websites, including Wikipedia, Google (though not for searches), Facebook, Twitter, Flickr, and YouTube

## CHAPTER 3 METHODOLOGY

### 3.1 Table Design

Various Tables to Maintain Information

Book Table for Keeping Track of Books

Field	Datatype	Default	Key	Extra
CODE	INTIO(11)	NOT NULL	PRIMARY	AUTO INCREMENT
BOOKNAME	VARCHAR(255)	NULL		
AUTHOR	VARCHAR(255)	NULL		
PUBLICATION	VARCHAR(255)	NULL		
SUBJECT	VARCHAR(255)	NULL		
NO OF COPIES	INT(10)	NULL		

### Teacher Table to Keep Teacher Information

FIELD	DATATYPE	DEFAULT	KEY	EXTRA
Tid	INT(11)	NULL		
Name	VARCHAR(255)	NULL		
Designation	VARCHAR(255)	NULL		
Branch	VARCHAR(255)	NULL		
Contactno	INT(13)	NULL		Auto increment
Lectures	LONG LOB	NULL		

**Issue Table to Keep Track of Books Issued**

FIELD	DATATYPE	DEFAULT	KEY	EXTRA
bookid	INT(11)	NOT NULL		
stuid	INT(11)	NOT NUL		
issuedate	DATE	NULL		
returndate	DATE	NULL		

**Student Login Table**

FIELD	DATATYPE	DEFAULT	KEY	EXTRA
Logid	INT(11)	NOT NULL	FOREIGN KEY	Reference Student
Username	VARCHAR(255)	NULL		
Password	VARCHAR(255)	NULL		
numbooks	Int(1)	NULL		

**Event Table for Event Information**

FIELD	DATATYPE	DEFAULT	KEY	EXTRA
Name	Varchar(255)	NULL		
Date	DATE	NULL		
Time	Varchar	NULL		
Mname	Varchar	NULL		
Contactno	Int(30)	NULL		
Email	Varchar(255)	NULL		
Venue	Varchar(255)	NULL		

**Teacher Login Table**

FILED	DATATYPE	DEFAULT	KEY	EXTRA
LOGINid	Int(11)	NOT NULL		
Username	VARCHAR(255)	NULL		
Password	VARCHAR(255)	NULL		

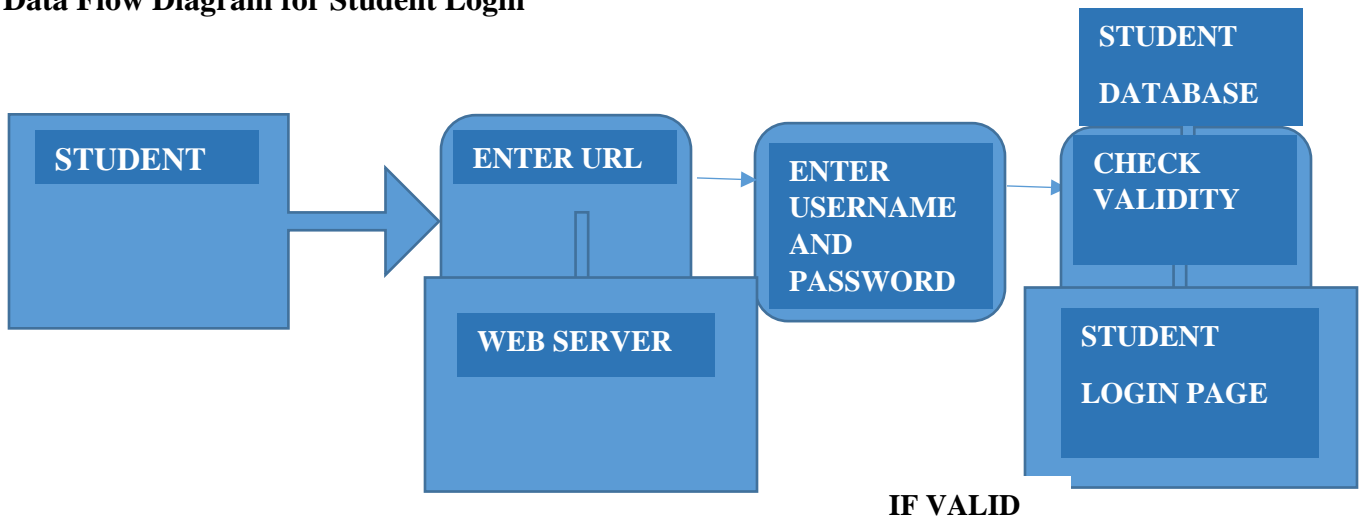

### 3.2 Data Flow Diagrams

Data Flow Diagram for Teacher Login

After entering to the home page of the website, teacher can choose the TEACHER LOGIN option where they are asked to enter username & password, and if he/she is a valid user then a teacher login page will be displayed.

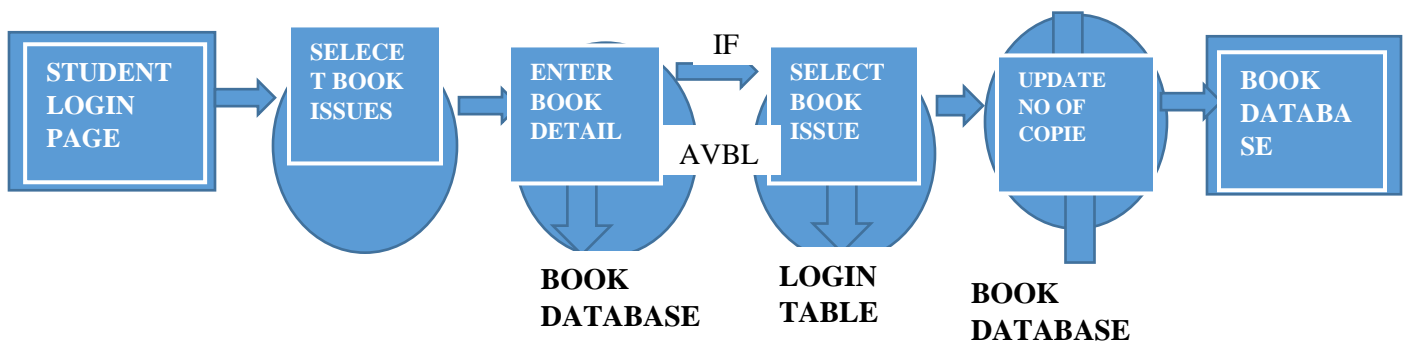

Data Flow Diagram for Student Login

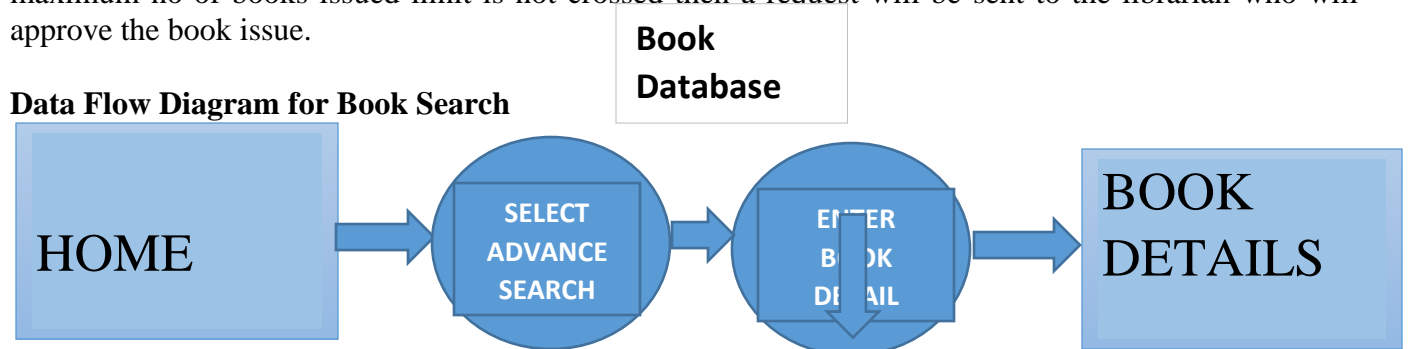

After entering to the home page of the website, student can choose the STUDENT LOGIN option where they are asked to enter username & password, and if he/she is a valid user then a student login page will be displayed.

Data Flow Diagram for Book Issue

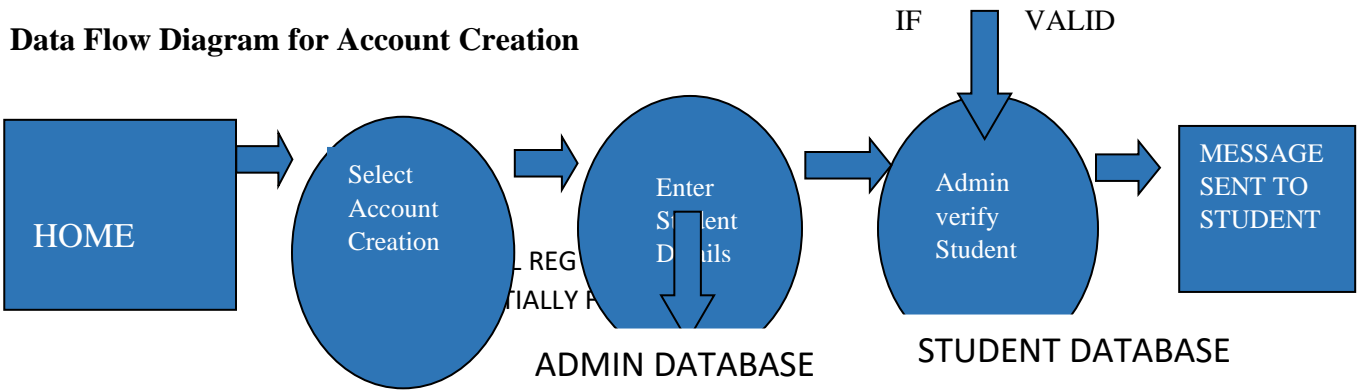

LOGIN  
DATABASE

It is a 2nd level Data Flow Diagram where after entering STUDENT LOGIN page he/she can select a book issue option where after entering the book detail, he/she can select the book issue option and if the maximum no of books issued limit is not crossed then a request will be sent to the librarian who will approve the book issue.

After the home page login there will be an option of the book search where after entering book detail like author name, publication, book name etc book details will be displayed.

After the home page login there will be an option of CREATE AN ACCOUNT where after entering student detail, if all the fields are filled then a request will be sent to the librarian who will approve him as a registered member of the library.

## CHAPTER 4 SYSTEM DESIGN AND IMPLEMENTATION

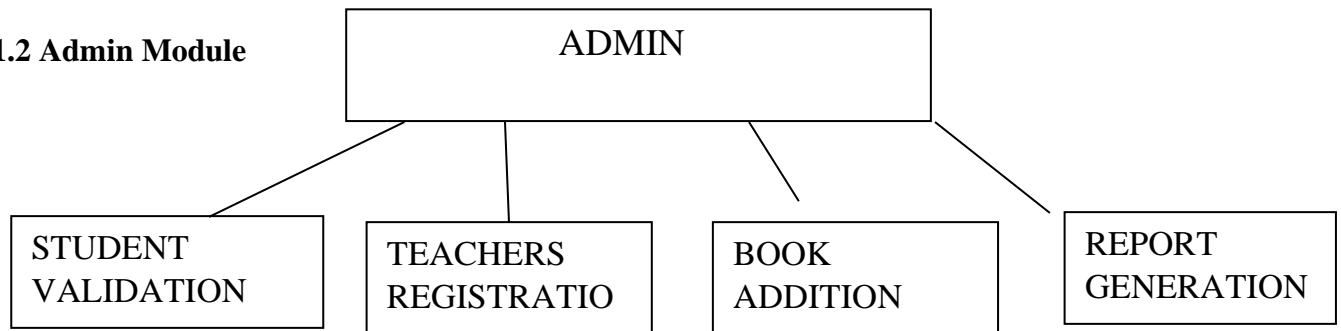

### 4.1 Screenshot for homepage

### 4.1.1 MODULE DESCRIPTION

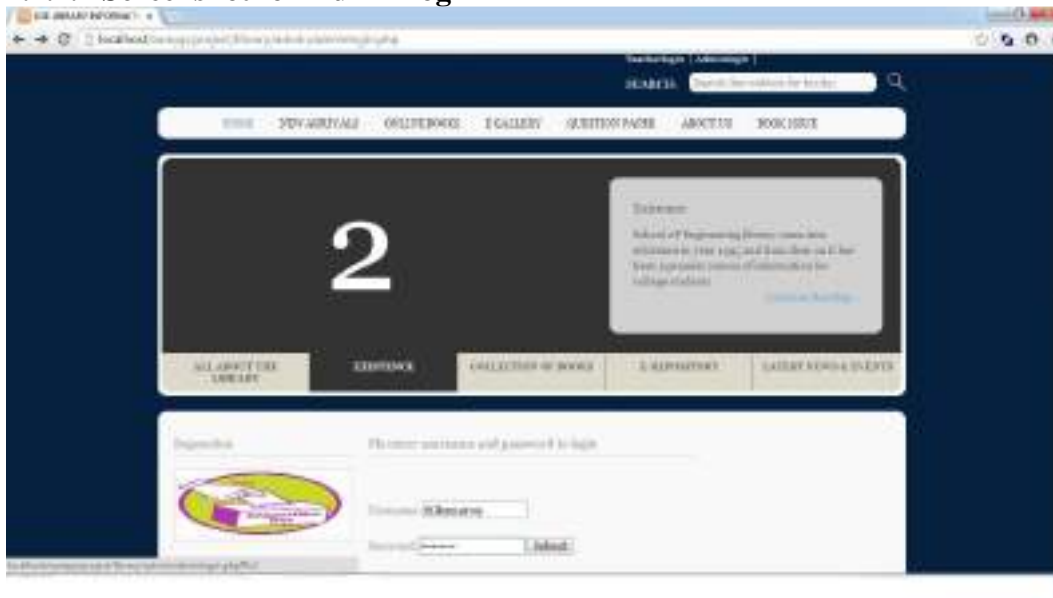

For Library Management System it is divided into the following Modules:

#### 4.1.2 Admin Module

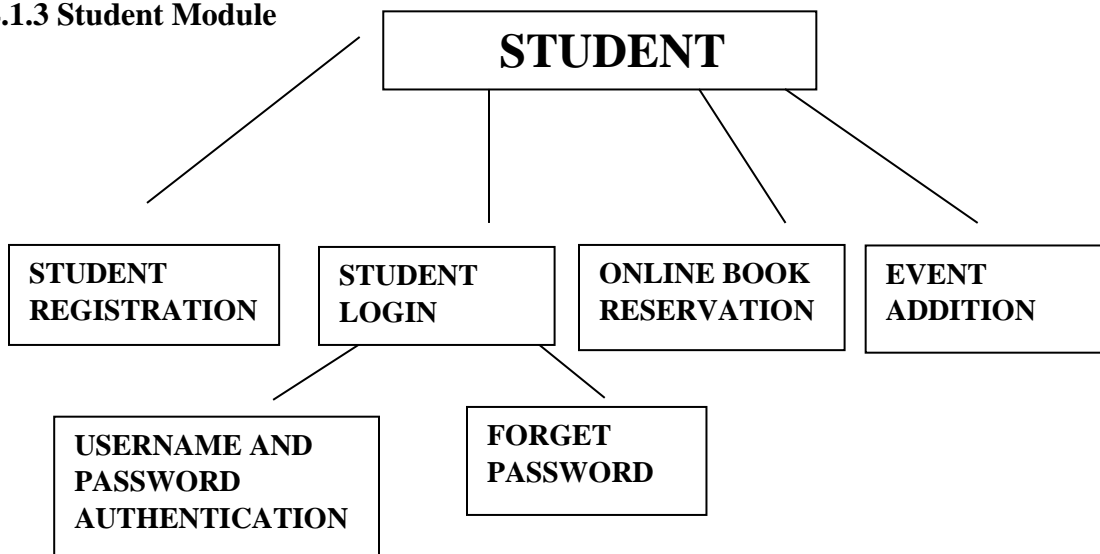

The following module contains various facilities like student validation, teacher registration, book addition, and report generation.

#### 4.1.2.1 Screenshot for Admin login

#### 4.1.3 Student Module

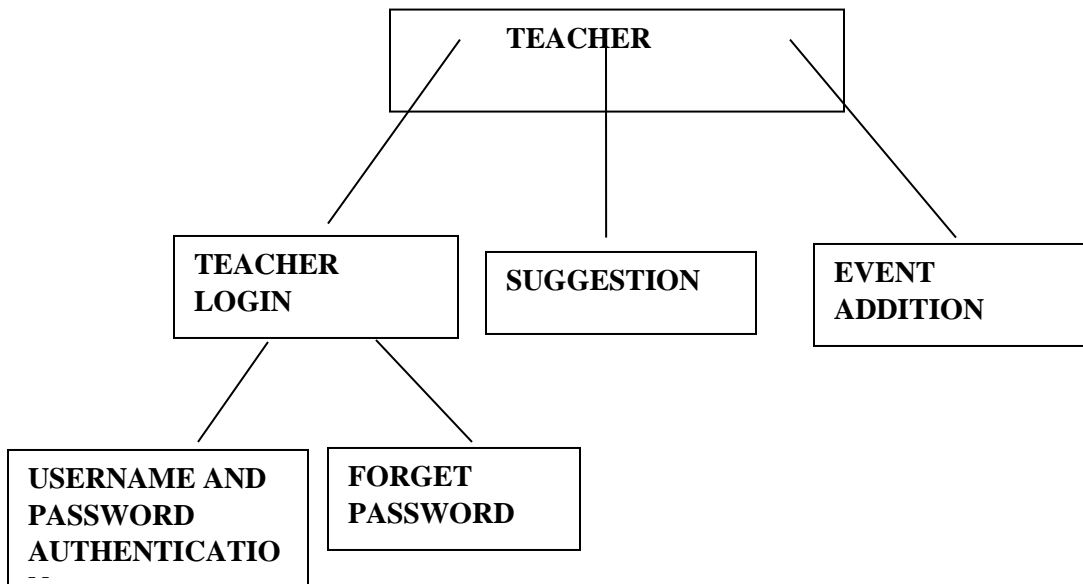

The following module contains various facilities like student registration, student login, online book reservation, and event addition. Any student if at any moment forgets his password he can retrieve it from forgot password option.

#### 4.1.3.2 Screenshot for Student login

#### 4.1.4 Teacher Module

The following module contains various facilities like teacher login, suggestions, and event addition. Further any teacher if at any moment forgets his/her password he/she can retrieve it from 'forgot password' option.

#### 4.1.4.3 Screenshot for teacher's login

#### 4.1.5 Book Module

The following module contains various facilities like add new book and search book. In the 'add new book' section if any new book comes in the library then the librarian can add its specifications. Similarly if the user wants to search for a specific book then he/she can use search book option to do it.

- 4.1.5.4 Book Transaction Module

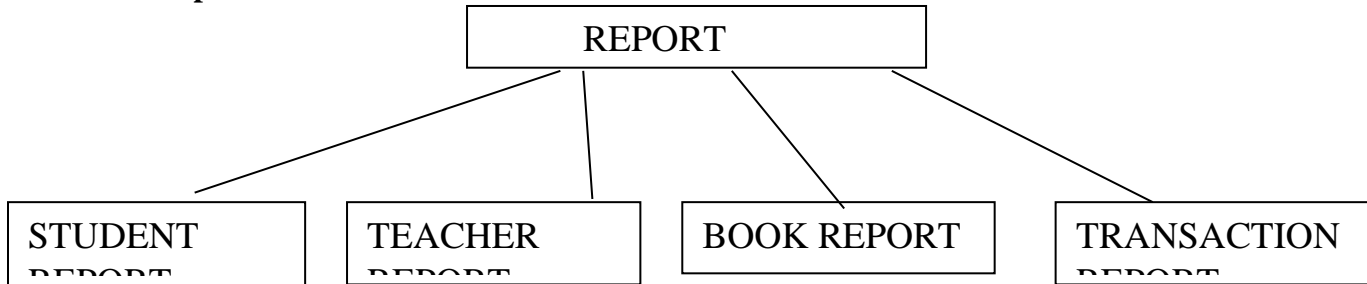

The following module contains various facilities like issue book, return book and check reservation.

#### 4.1.5.4 Screenshot for Book search

#### 4.1.6 Report Module

The following module contains various facilities like student report, teacher report, book report, and transaction report.

#### PROGRAM SOURCECODE

## **CHAPTER 5 CONCLUSION**

### **5.1 Summary**

This website (Online Library) provides a computerized version of library management system which will benefit the students as well as the staff of the library.

It makes entire process online where student can search books; staff can generate reports and do book transactions. It also has a facility for student login where student can login and can see status of books issued as well request for book or give some suggestions. It has a facility of teacher's login where teachers can add lectures notes and also give necessary suggestion to library and also add info about workshops or events happening in our college or nearby college in the online notice board.

There is a future scope of this facility that many more features such as online lectures video tutorials can be added by teachers as well as online assignments submission facility, a feature

Of group chat where students can discuss various issues of engineering can be added to this project thus making it more interactive more user friendly and project which fulfills each users need in the best way possible.

### **5.2 Conclusion**

The aim of the system testing process was to determine all defects in our project .The program was subjected to a set of test inputs and various observations were made and based on these observations it will be decided whether the program behaves as expected or not.

Our Project went through two levels of testing

1. Unit testing
2. Integration testing

## REFERENCES

- **Adamson (2008)** An integrated library system, also known as a library management system is an enterprise resource planning system for a library, used to track items owned, orders made, bills paid, and users who have borrowed.
- **Ademodi & Adepoju, (2009)** investigated the computer skill among librarians in academic libraries on Ondo and Ekiti State in Nigeria.
- **Ashutosh & Ashish, (2012)** the Online-Library Information System is an Online-Library platform mostly used for monitoring and controlling the transactions in a library.
- **Johnson, (2007)** explained more about library and information science education in developing countries.
- **Rahman, Khatun and Islam, (2008)** reviewed the library education in Bangladesh.
- **Rasmus Lerdorf (1995)** the reference implementation of PHP is now produced by The PHP Group.
- **Nepal, Siwakoti, (2008)** found that there was no government agency to control, monitor and evaluate the school libraries activities.

28/3/19

**ASD Govt. Degree College for Women(A)**  
Jagannaickpur, Kakinada

**Activity Register 2018-19**

Date	12-10-18
Conducted through (DRC/JKC/ELF/NCC/NSS/ Departments etc.)	Zoology department
Nature of Activity (Seminar/Workshop/Extn. Lecture etc..)	<b>PROJECT WORK</b>
Title of the Activity	PROJECTWORK
Name of the Department/Committee	<b>Department of zoology</b>
Details of Resource Persons ( Name . Designation etc.,)	U.satyanarayana guest faculty M.satyavaralakshmi lecturer n zoology N.veera chanti lec in aqua culturetechnology
No.of students participated	33 III CBZ.
Brief Report on the activity	To raise the spirit of students developing their skills on general knowledge besides subject learning
Name of the Lecturers who Planned & conducted the activity	M.Satyavaralakshmi U.Satyanarayana Guestfaculty in Zoology
Signature of the in charge	Dr.K.Aruna lecturer in charge of micro biology
Signature of the Principal	
Remarks	

**DEPARTMENT OF ZOOLOGY**  
**Acknowledgement**

We are profound ably thankful to Dr.D.Ratna Giri Usha Gau principal and  
Dr. U. Satyanarayana lee in Zoology and Smt.M.Satyavaralakshmi,lee in Zoology,  
Smt N.Veerachanti lee in aquaculture technology who inspired and encouraged us to take up  
this project work we are also thankful to Dr.K.Aruna Garu Lee Incharge of microbiology for  
giving her valuable advice s and critically going through the manuscripts and making  
necessary corrections.  
Lastly but not least we are indebted to each and every faculty member especially sri  
I.Pradeep having designed and Xeroxed the title page aand his help rendered in bringing in  
this from project work submission to the department of zoology A.S.D.Govt Degree College For  
Women (A)

## CERTIFICATE

Certified that the study project on "Identification of Fishes" was taken up students of III BSC CBZ under the able guidance of Sri U.Satyanarayana Lec in Zoology, M.Satyvaralakshmi, Lec in zoology at Local Market Of Jagannaikpur Kakinada. The project work completed most systematic way.

## IDENTIFICATION OF FISHES

### II IDENTIFICATION OF FISHES

Scientific identification of fishes is based mainly on external characters such as body shape, length, depth, mouth and nature of fish spines, scales, etc. The best way to collect fish for a scientific or taxonomic study is to catch them alive through a fishing net, trap or any other device locally adopted except poisoning with toxic chemicals.

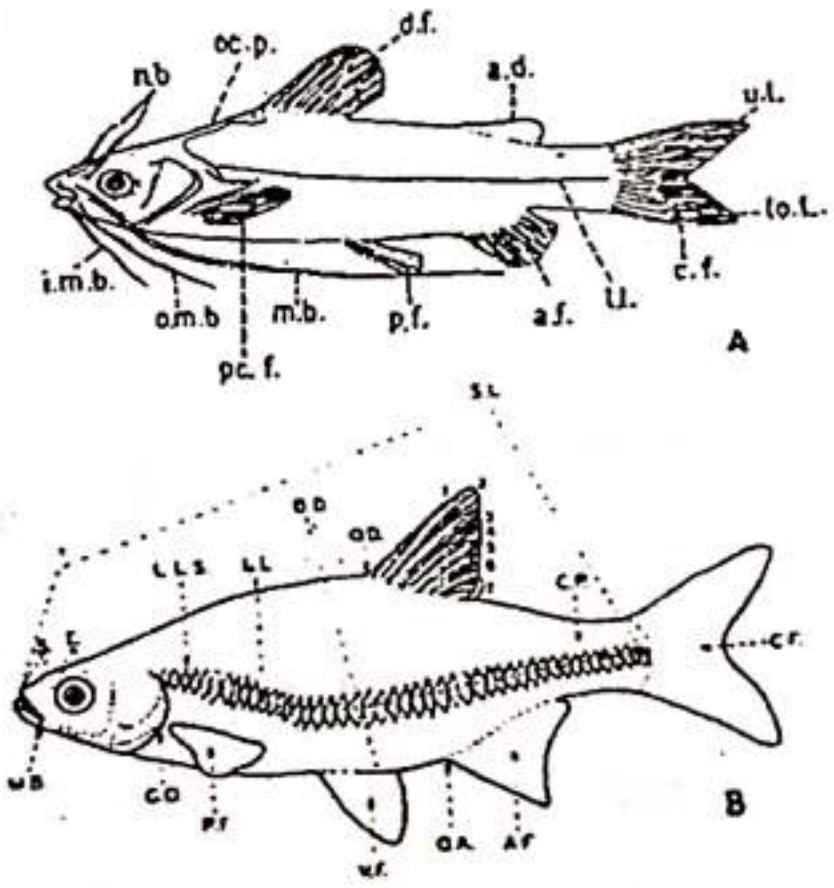

Fig 1: Outline lateral view diagrams of A) a non-scaled catfish and B) a scaled fish showing body parts

**A. Non-scaled catfish**  
 a.d. = adipose dorsal fin  
 a.f. = anal fin

**B. Scaled fish**  
 A.F. = anal fin  
 P.D. = pectoral dorsal fin

o.m.b. = outer mandibular barbell  
p.f. = pelvic fin  
pc.f. = pectoral fin  
u.l. = upper lobe of caudal fin

O.D. = origin of dorsal fin  
P.F. = pectoral fin  
S. = length of snout  
S.L. = standard length  
V.F. = pelvic fin  
1 to 7, dorsal fin rays (note that two very small rays at the front end of this fin are not counted and that the last fin ray is divided to its base

Fish have different ecological preferences and inhabit waters best suited to them. Environmental factors influence the predominance of certain species of fish. For instance, river fishes prefer riffle or quiet areas; a hill stream with fast flowing water over rocky bed may not have large sized carps, while dimly lit, shallow swampy pools may have cat fishes, mussels, eels and may not have fishes like rohu, mrigal etc.

The fishes caught are segregated mainly based on the presence or absence of scales on the body. When scales are present, they are further separated based on body shape, number and length of fins. In the case of fishes without fins, they are separated according to the total number of barbels. After the segregation, they are identified according to the keys.

Classification of fishes for scientific study is done through taxonomy or systematics. Under this, each fish is given a name of two words; the first one is generic name and the second specific name, followed by the name of the author who described it first. There may be many fishes under the first word, which is called *Genus*. This indicates the affinity of the fish grouped under the same genus due to common features. Similarly, a number of *Genera* (plural of genus) are grouped under the term *Family*, while a number of families are put under an *Order*. Many orders come under a *Class*. The characters differentiating orders and families are distinct, but down the hierarchy, they become insignificant. For identification, the fishes are first grouped under orders, then families, genera and species. Identification keys are available for all orders, families and genera.

**Adipose fin:** A short fleshy fin, without rays behind the dorsal fin mainly on the back of catfishes.

**Antrorse:** Pointing forward or towards anterior direction especially in pectoral spine.

**Axilla:** Space behind base of a fin.

**Axillary:** Pertaining to the axilla.

**Barbel/s:** Slender, tactile whisker-like projection extending from the head of some fishes; functioning primarily as a sensory organ for locating food and locations.

**Base:** The part where a fin joins body, as in length of dorsal/anal fin base.

**Branchial:** As referred to gills.

**Branchiostegeal rays:** Numerous tiny thin bones arranged fanwise from the lower edge of the opercle to the ventral surface of the head and covered by the branchiostegeal membrane.

**Breast:** Ventral part of the body situated between head and pectoral fins.

**Caudal peduncle:** The narrow posterior part of the fish's body between anal and caudal fin.

**Ctenoid scale:** Scales with rough, comb-like or toothed margin.

**Cycloid scale:** Scales that are smooth-edged, more or less circular with concentric striations.

**Depth of body:** The greatest vertical height of fish.

**Dorsal:** The back or upper part of the body.

**Fin rays:**

All paired and median fins in teleosts have long, mobile filament like prolongations called rays. The movements of the fins are due to the action of muscles, the movements possible due to the articulations and often flexibility of these rays. The term "ray" also applies to spines, whether they are included within the membrane of a fin or not.

The chief types of fin rays encountered are:

- **Hard rays:** a number of soft rays united solidly to form hard rays, which are rigid and sharply pointed. These are formed of cartilage. The outermost caudal fin ray called the principal ray is also a hard ray.

- **Spinous rays:** are made of bone tissues and are harder and stronger than rays. These are usually not flexible and they are commonly found in catfishes.

- **Simple ray:** It is either soft or hard but without any branching at its tip or elsewhere.

- **Branched ray:** It is branched either from the base or middle or tip of the ray.

Fig 3: Different caudal fin shapes

(A-slightly emarginated or furcate, B-rounded with wavy margins, C-forked, D-wedge or paddle shaped, E-notched, F-truncate or cut square, G-rounded, H-lanceolate and J-ovate)

Fig 4: BR-branchiostegial ray, C-chin, F-forehead, HL-head length, OP-interopercule, MB-maxillary barbell, MN-mandible, MO-mouth, MX-maxillary, NA-nape, NO-nostrils, OP-opercule, PMX-premaxillary, POP-preopercule, SOP-subopercule and SOR-suborbital

Gills: The respiratory apparatus of fishes, found within the gill openings.

Gill archers: The bony supports to which the gill rakers are attached.

Gill opening: The opening situated generally on either side of the head; the water used for breathing enters by the mouth and is expelled through gill-openings.

Gill rakers: These are thin needle like prolongations on the gill arches.

**Opercle or operculum:** The gill cover.

**Opercular flap:** A fleshy extension of the rear edge of opercle.

**Origin of fin:** The point where the first ray is inserted into the body of the fish.

**Pectoral fins:** The paired fins attached to the shoulder girdle.

**Pelvic fins:** The paired fins placed behind or below the pectoral fins.

**Scale:** One of the thin, bony or horny plates covering the whole or part of the body of most fishes. Scales can be macroscopic as on eel, small as on Chela and large as on Tor. A fish may have no scales as the catfishes.

Fig 5: Different types of fins and rays

A-long dorsal fin, B-short dorsal fin, C-high dorsal fin, D-low dorsal fin, E-simple unbranched ray, F-thick ray, G-antrorsely serrated dorsal ray and H-branched ray

5	CONCLUSION	59

Online - Library Management System is an application which refers to library systems which are generally small or medium in size. It is used by librarian to manage the library using a computerized system where he/she can record various transactions like issue of books, return of books, addition of new books, addition of new students etc.

Books and student maintenance modules are also included in this system which would keep track of the students using the library and also a detailed description about the books a library contains. With this computerized system there will be no loss of book record or member record which generally happens when a non-computerized system is used. In addition, report module is also included in Library Management System. If user's position is admin, the user is able to generate different kinds of reports like lists of students registered, list of books, issue and return reports. All these modules are able to help librarian to manage the library with more convenience and in a more efficient way as compared to library systems which are not computerized.

## **1.2 Statement of Problem**

The library information is to an extent manually recorded and reveals a number of problems.

- The recording of students that borrow some books for further reading is done manually on a book that appears rough. Thus, the books are exposed to physical damage, information can be lost and dust particles are accumulated.

- It also takes a lot of time to arrange these books in its serial number and moreover the book keepers always felt tired while arranging these books.
- These books which are kept in the library can easily be exposed to insect and other physical damages. Like; Fire, Water and Ants etc.

### **1.3 Aim and Objectives of the Study**

The project aim and objectives that will be achieved after completion of this project are discussed in this subchapter. The aim and objectives are as follows:

#### **(A) Aim**

- Online book issue
- Request column for librarian for providing new books
- A separate column for digital library
- Student login page where student can find books issued by him/her and date of return.

#### **(B) Objective:**

- A search column to search availability of books
- A teacher login page where teacher can add any events being organized in the college and important suggestions regarding books.
- Online notice board about the workshop.

## **1.4 Significance of the Study**

This platform showcases information to the society without any stress:

- Improve Access
- Wider Access
- Improve Information Sharing

### **1.4.1 Improve Access**

Connect patrons with the information they seek with these promising electronic tools! Improved Access to Information: Portals, Content Selection, and Digital Information focuses on how you can improve access to information using electronic reference resources.

The product of the National Open University of Nigeria Libraries, Improved Access to Information offers library administrators new approaches for overcoming the proliferation of electronic information and making it readily available to students. This project will help you provide essential understanding to student and secure their patron base.

### **1.4.2 Wider Access**

In the case of wider access, this expresses the evolution of transporting information through an online video tutorial, voice recommendation, and

online library. Most times student do value this platform, because of its more accessibility to their various courses.

On like National Open University of Nigeria previous portal has this easy navigation for an online test known as (I-Learn). This platform known as (I-Learn) has been of good help to the students, in order to read their books and download some tutor mark assessment materials.

#### **1.4.3 Improve Information Sharing**

Sharing of information through online-library has been a multi-purpose and strategy for student to have a standard impact to their studies. In fact this methodology has been the best for students, both in the aspect of distance-learning and nearby centers. This pattern has innovated a style that grants the students a free access to share and save their leisure time in reading their books online. This online library has also helped the society to profound and understand the importance of reading mostly online.

#### **1.5 Scope of the Study**

The scope of this study covers the online-library as a whole, and its flexibility for students and society to read online.

#### **1.6 Limitation of the Study**

This project was constrained by the following factors:

##### **(a) Financial Constraints**

Bearing in mind the economic situation of the nation, it was found difficult in making both ends meet, because of the exorbitant nature of things nowadays in travelling for the collection of data needed for the project.

**(b) Time Constraints**

Looking at the interval between the resumption and vacation of the final semester for the project to be completed, the time given seemed to be short for the collection of required information for better work to be done.

**(c) Non-Availability of Material**

During this project, it was noticed that the required materials needed for the project are not documented. Those that were documented lacked storage facilities where they can be reached.

**1.7 Definition of Technical terms**

- ❖ **BROAD ACCESS:** this expresses the evolution of transporting information through an online video tutorial, voice recommendation, and online library. Most times student do value this platform, because of its more accessibility to their various courses and video tutorials.
- ❖ **PORTABILITY:** this platform (online library) is been organize in a way that will benefit the student and as well the society, more especially whenever the fill like surfing the internet for more educative instruction.

## CHAPTER TWO LITERATURE REVIEW

### 2.1 Overview of Library Information System

Library is regarded as the brain of any institution of learning, of course many institutions understand the importance of the library to the growth of the institution and their esteem users which we categorically call the students. An integrated library system, also known as a library management system (Adamson et al., 2008) is an enterprise resource planning system for a library, used to track items owned, orders made, bills paid, and users who have borrowed.

The Online-Library Information System is an Online-Library platform mostly used for monitoring and controlling the transactions in a library

(Ashutosh&Ashish,2012). Online-Library Information System supports the general requirement of the library such as the acquisition, cataloguing, circulation and other sections.

Before the advent of computer in modern age there are different methods of keeping records in the library. Records are kept in the library on shelves and each shelf are labeled in an alphabetical or numerical order, in which the categories of books available are arranged on different position on the shelves and as well are recorded on the library manuscript and when any book is to be referenced the manuscript is being referred to, to know the position of such required book by the person that requested for the book. After the invention of computer different researchers have carried out various approach

on an automated library management system in which this project is as well all about.

The first library management system to be reviewed is the KOHA library management system. Since the original implementation in 1999, KOHA functionality has been adopted by thousands of libraries worldwide, each adding features and functions, deepening the capability of the system.

With the 3.0 release in 2005, and the integration of the powerful Zebra indexing engine, KOHA became a viable, scalable solution for libraries of all kinds.

LibLime KOHA is built on this foundation. With its advanced feature set, LibLime KOHA is the most functionally advanced open source Integrated Library System in the market today.

The major setback of this Library Management System is that it is a web based and as a result it is not security conscious because hackers could have the database hacked and access or modify the information of such user.

Another Online-Library Information System is the Capital's library software with the following benefits Increases support available for staff and users in any modern library service, provides efficiency, innovative system that's saves library time and improves the user experience.

An Online-library information system usually comprises a relational database, software to interact with that database, and two graphical user interfaces (one for users, one for staff). Most integrated library systems,

separate software functions into discrete programs called modules, each of them integrated with a unified interface.

Johnson, (2007) viewed library and information science education in developing countries.

He concluded that LIS programs in developing countries continue to suffer from lack of financial support by governments.

Rahman,Khatun&Islam,(2008) reviewed the library education in Bangladesh. The study found that majority of institutions in Bangladesh do not have well-equipped computer labs or sufficient numbers of computers for students. A sufficient number of classification and cataloguing tools (DDC, LC, Sears list of subject headings for practical were not present.

Many institutions either have no library or inadequate collection of textbooks. Professional's status was also found very low, low pay scale and limited opportunities for promotion.

In Nepal, Sivakoti, (2008) found that there was no government agency to control, monitor and evaluate the school libraries activities. There was lack of awareness programs, budgetary constraints, inadequate space, inadequate library materials, lack of trained and skilled manpower and lack of appropriate government policy and lack of information literacy.

Ademodi&Adepoju, (2009) investigated the computer skill among librarians in academic libraries on Ondo and Ekiti State in Nigeria. It was found the shortage of computers and computer skills among professionals. The study recommended that more attention and funds should be provided for training

and procurement of ICT infrastructure in Nigerian University libraries. For computerization purpose, library administration should solicit funds and assistant from foreign agencies and foundations who are interested for the cause.

## **2.2 Software Requirement Specification**

### **2.2.1 General Description**

#### **Product Description:**

An Online-Library Information System is a computerized system which helps user (librarian) to manage the library daily activity in electronic format. It reduces the risk of paper work such as file lost, file damaged and time consuming.

It can help user to manage the transaction or record more effectively and time-saving.

#### **Problem Statement:**

The problem occurred before having computerized system includes:

- File lost
- When computerized system is not implemented file is always lost because of human environment. Sometimes due to some human error there may be a loss of records.
- File damaged when a computerized system is not there file is always lost due to some accident like spilling of water by some member on file

accidentally. Besides some natural disaster like floods or fires may also damage the files.

- Difficult to search record
- When there is no computerized system there is always a difficulty in searching of records if the records are large in number.
- Space consuming
- After the number of records become large the space for physical storage of file and records also increases if no computerized system is implemented.
- Cost consuming
- As there is no computerized system to add each record, paper will be needed which will increase the cost for the management of library.

### **2.2.2 System Objectives**

- Improvement in control and performance
- The system is developed to cope up with the current issues and problems of library .The system can add user, validate user and is also bug free.
- Save cost
- After computerized system is implemented less human force will be required to maintain the library thus reducing the overall cost.
- Save time

- Librarian is able to search record by using few clicks of mouse and few search keywords thus saving his valuable time.
- Option of online Notice board
- Librarian will be able to provide a detailed description of workshops going in the college as well as in nearby colleges
- Lecture Notes
- Teacher have a facility to upload lectures notes in a pdf file having size not more than 10mb

### **2.2.3 System Requirements**

#### **2.2.3.1 Non Functional Requirements**

##### **Product Requirements**

##### **Efficiency Requirement**

When a library management system will be implemented librarian and user will easily access library as searching and book transaction will be very faster.

##### **Reliability Requirement**

The system should accurately performs member registration, member validation, report generation, book transaction and search

### **Usability Requirement**

The system is designed for a user friendly environment so that student and staff of library can perform the various tasks easily and in an effective way.

### **Organizational Requirement**

#### **Implementation Requirements**

In implementing whole system it uses html in front end with php as server side scripting language which will be used for database connectivity and the backend i.e. the database part is developed using MySQL.

#### **Delivery Requirements**

The whole system is expected to be delivered in six months of time with a weekly evaluation by the project guide.

### **2.2.3.2 Functional Requirements**

#### **1. Normal User**

##### **1.1 User Login**

#### **Description of feature**

This feature used by the user to login into system. They are required to enter user id and password before they are allowed to enter the system .The user id and password will be verified and if invalid id is there user is allowed to not enter the system.

#### **Functional requirements**

- user id is provided when they register
- The system must only allow user with valid id and password to enter the system

-The system performs authorization process which decides what user level can access to.

-The user must be able to logout after they finished using system.

### **2.2.3.3 Register New User**

Description of feature

This feature can be performed by all users to register new user to create account.

#### **Functional requirements**

-System must be able to verify information

-System must be able to delete information if information is wrong

### **2.2.3.4 Register New Book**

Description of feature

This feature allows to add new books to the library

#### **Functional requirements**

-System must be able to verify information

-System must be able to enter number of copies into table.

- System must be able to not allow two books having same book id.

### **2.2.3.5 Search Book**

Description of Feature

This feature is found in book maintenance part. We can search book based on book id, book name, publication or by author name.

#### **Functional requirements**

- System must be able to search the database based on select search type
- System must be able to filter book based on keyword entered
- System must be able to show the filtered book in table view

#### **2.2.3.6 Issue Books and Return Books**

##### **Description of Feature**

This feature allows to issue and return books and also view reports of book issued.

##### **Functional requirements**

- System must be able to enter issue information in database.
- System must be able to update number of books.
- System must be able to search if book is available or not before issuing books
- System should be able to enter issue and return date information

#### **2.2.3.7 Event Addition**

##### **Description of Feature**

This feature allows teacher and student to add information about various workshops being conducted in college and colleges nearby.

##### **Functional requirements**

- System should be able to add detailed information about events.

-System should be able to display information on notice board available in the homepage of site

#### **2.2.4 Software and Hardware Requirements**

This section describes the software and hardware requirements of the system

##### **2.2.4.1 Software Requirements**

- Operating system- Windows 7 is used as the operating system as it is stable and supports more features and is more user friendly
- Database MYSQL-MYSQL is used as database as it easy to maintain and retrieve records by simple queries which are in English language which are easy to understand and easy to write.
- Development tools and Programming language- HTML is used to write the whole code and develop webpages with css, java script for styling work and php for sever side scripting.

##### **2.2.5.1 Hardware Requirements**

- Intel core i5 2nd generation(2G) in year 1950's was used as a processor because it is fast than other processors and it provide reliable and stable and we can run our pc for longtime. By using this processor we can keep on developing our project without any worries.
- Ram 1gb is used as it will provide fast reading and writing capabilities and will in turn support in processing

### **2.3 Existing V/s Proposed System :**

- i.** Existing system does not have any facility of teacher's login or student login whereas proposed system will have a facility of student login as well as teacher's login
- ii.** Existing system does not have a facility of online reservation of books whereas proposed system has a facility of online reservation of books
- iii.** Existing system does not have any facility of online notice board where description of workshops happening in our college as well as nearby colleges is being provided.
- iv.** Existing system does not has any option of lectures notes uploaded by teachers whereas proposed system will have this facility
- v.** Existing system does not have any facility to generate student reports as well book issue reports whereas proposed system provides librarian with a tool to generate reports
- vi.** Existing system does not has any facility for book request and suggestions where as in proposed system after logging in to their accounts student can request books as well as provide suggestions to improve library

#### **2.3.1 Software Tools Used :**

The whole Project is divided in two parts the front end and the back end.

### 2.3.2 Front end :

The front end is designed using html, Php, css, Java script

#### HTML- HTML or Hyper Text Markup Language:

This is the main markup language for creating web pages and other information that can be displayed in a web browser. HTML is written in the form of HTML elements consisting of *tags* enclosed in angle brackets (like `<html>`), within the web page content. HTML tags most commonly come in pairs like `<h1>` and `</h1>`, although some tags represent *empty elements* and so are unpaired, for example `<img>`. The first tag in a pair is the *start tag*, and the second tag is the *end tag* (they are also called *opening tags* and *closing tags*). In between these tags web designers can add text, further tags, comments and other types of text-based content.

The purpose of a web browser is to read HTML documents and compose them into visible or audible web pages. The browser does not display the HTML tags, but uses the tags to interpret the content of the page. HTML elements form the building blocks of all websites. HTML allows images and objects to be embedded and can be used to create interactive forms. It provides a means to create structured documents by denoting structural semantics for text such as headings, paragraphs, lists, links, quotes and other items. It can embed scripts written in languages such as JavaScript which affect the behavior of HTML web pages.

**CSS- Cascading Style Sheets (CSS):** is a style sheet language used for describing the look and formatting of a document written in a markup language. While most often used to style web pages and interfaces written in HTML and XHTML, the language can be applied to any kind of XML document, including plain XML, SVG and XUL. CSS is a cornerstone specification of the web and almost all web pages use CSS style sheets to describe their presentation. CSS is designed primarily to enable the separation of document content from document presentation, including elements such as the layout, colors, and fonts. This separation can improve content accessibility, provide more flexibility and control in the specification of presentation characteristics, enable multiple pages to share formatting, and reduce complexity and repetition in the structural content (such as by allowing for table less web design). CSS can also allow the same markup page to be presented in different styles for different rendering methods, such as on-screen, in print, by voice (when read out by a speech-based browser or screen reader) and on Braille-based, tactile devices. It can also be used to allow the web page to display differently depending on the screen size or device on which it is being viewed. While the author of a document typically links that document to a CSS file, readers can use a different style sheet, perhaps one on their own computer, to override the one the author has specified. However if the author or the reader did not link the document to a specific style sheet the default style of the browser will be applied. CSS specifies a priority scheme to determine which style rules apply if more than one rule matches

against a particular element. In this so-called *cascade*, priorities or weights are calculated and assigned to rules, so that the results are predictable.

**JAVA SCRIPT- JavaScript (JS):** is a dynamic computer programming language. It is most commonly used as part of web browsers, whose implementations allow client-side scripts to interact with the user, control the browser, communicate asynchronously, and alter the document content that is displayed. It is also being used in server-side programming, game development and the creation of desktop and mobile applications. JavaScript is a prototype-based scripting language with dynamic typing and has first-class functions. Its syntax was influenced by C. JavaScript copies many names and naming conventions from Java, but the two languages are otherwise unrelated and have very different semantics. The key design principles within JavaScript are taken from the self and Scheme programming languages. It is a multi-paradigm language, supporting object-oriented, imperative, and functional programming styles. The application of JavaScript to use outside of web pages—for example, in PDF documents, site-specific browsers, and desktop widgets is also significant. Newer and faster JavaScript VMs and platforms built upon them (notably Node.js) have also increased the popularity of JavaScript for server-side web applications. On the client side, JavaScript was traditionally implemented as an interpreted language but just-in-time compilation is now performed by recent (post-2012) browsers.

**PHP:** PHP: is a server-side scripting language designed for web development but also used as a general-purpose programming language. PHP is now installed on more than 244 million websites and 2.1 million web servers.

Originally created by Rasmus Lerdorf in 1995, the reference implementation of PHP is now produced by The PHP Group. While PHP originally stood for *Personal Home Page*, it now stands for *PHP: Hypertext Preprocessor*, a recursive acronym. PHP code is interpreted by a web server with a PHP processor module, which generates the resulting web page: PHP commands can be embedded directly into an HTML source document rather than calling an external file to process data. It has also evolved to include a command-line interface capability and can be used in standalone graphical applications. PHP is free software released under the PHP License. PHP can be deployed on most web servers and also as a standalone shell on almost every operating system and platform, free of charge.

### **2.3.2 Back End:**

The back end is designed using my sql which is used to design the databases MySQL- MySQL ("My S-Q-L", officially, but also called "My Sequel") is (as of July 2013) the world's second most widely used open-source relational database management system (RDBMS). It is named after co-founder Michael Widenius daughter, my. The SQL phrase stands for Structured Query Language. The MySQL development project has made its source code available under the terms of the GNU General Public

License, as well as under a variety of proprietary agreements. MySQL was owned and sponsored by a single for-profit firm, the Swedish company MySQL AB, now owned by Oracle Corporation. MySQL is a popular choice of database for use in web applications, and is a central component of the widely used LAMP open source web application software stack (and other 'AMP' stacks). LAMP is an acronym for "Linux, Apache, MySQL, Perl/PHP/Python." Free-software-open source projects that require a full-featured database management system often use MySQL. For commercial use, several paid editions are available, and offer additional functionality. Applications which use MySQL databases include: TYPO3, MOD x, Joomla, Word Press, php BB, My BB, Drupal and other software. MySQL is also used in many high-profile, large-scale websites, including Wikipedia, Google (though not for searches), Facebook, Twitter, Flickr, and YouTube.

**CHAPTER 3**  
**METHODOLOGY**

**3.1 Table Design:**

**Various Tables to Maintain Information:**

**Book Table for Keeping Track of Books:**

Field	Data type	Default	Key	Extra
CODE	INT(11)	NOT NULL	PRIMARY	AUTO INCREMENT
BOOKNAME	VARCHAR(255)	NULL		
AUTHOR	VARCHAR(255)	NULL		
PUBLICATION	VARCHAR(255)	NULL		
SUBJECT	VARCHAR(255)	NULL		
NO OF COPIES	INT(10)	NULL		

**Student Table for Student Information:**

Field	Data type	Default	Key	Extra
Li bid	INT(11) NOT	NULL	Primary key	Auto increment
Reg. no	INT(10)	NULL		
branch	VARCHAR(255)	NULL		
section	VARCHAR(255)	NULL		
semester	VARCHAR(255)	NULL		
section	VARCHAR(2)	NULL		
year fad m	INT(5)	NULL		

**Teacher Table to Keep Teacher Information:**

FIELD	DATATYPE	DEFAULT	KEY	EXTRA
T id	INT(11)	NULL		
Name	VARCHAR(255)	NULL		
Designation	VARCHAR(255)	NULL		
Branch	VARCHAR(255)	NULL		
Contact no	INT(13)	NULL		Auto increment
Lectures	LONG LOB	NULL		

**Issue Table to Keep Track of Books Issued:**

FIELD	DATA TYPE	DEFAULT	KEY	EXTRA
Book id	INT(11)	NOT NULL		
Stu id	INT(11)	NOT NUL		
Issue date	DATE	NULL		
Return date	DATE	NULL		

**Student Login Table:**

FIELD	DATA TYPE	DEFAULT	KEY	EXTRA
Log id	INT(11)	NOT NULL	FOREIGN KEY	Reference Student
Username	VARCHAR(255)	NULL		
Password	VARCHAR(255)	NULL		
Num. books	INT(1)	NULL		

**Event Table for Event Information:**

FIELD	DATATYPE	DEFAULT	KEY	EXTRA
Name	VARCHAR (255)	NULL		
Date	DATE	NULL		
Time	VARCHAR	NULL		
M name	VARCHAR	NULL		
Contact no	INT (30)	NULL		
Email	VARCHAR(255)	NULL		
Venue	VARCHAR (255)	NULL		

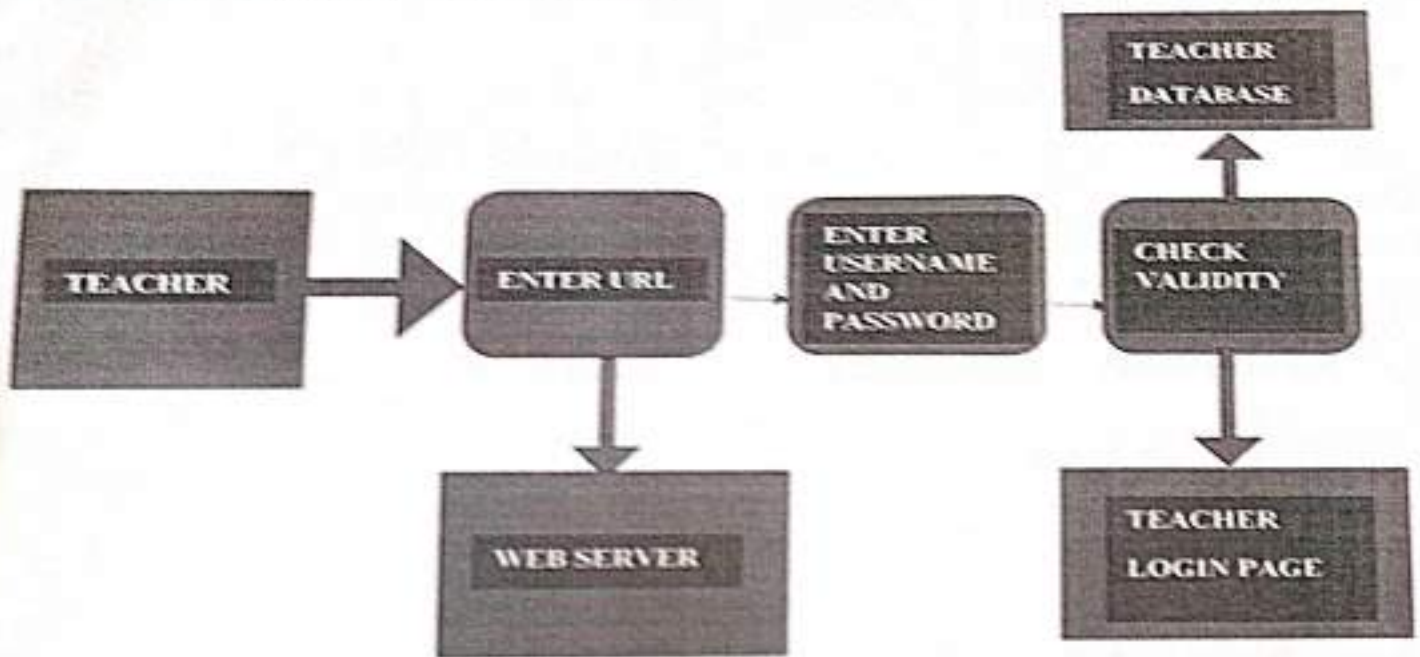

**Teacher Login Table:**

FIELD	DATATYPE	DEFAULT	KEY	EXTRA
LOGIN id	INT (11)	NOT NULL		
Username	VARCHAR(255)	NULL		
Password	VARCHAR(255)	NULL		

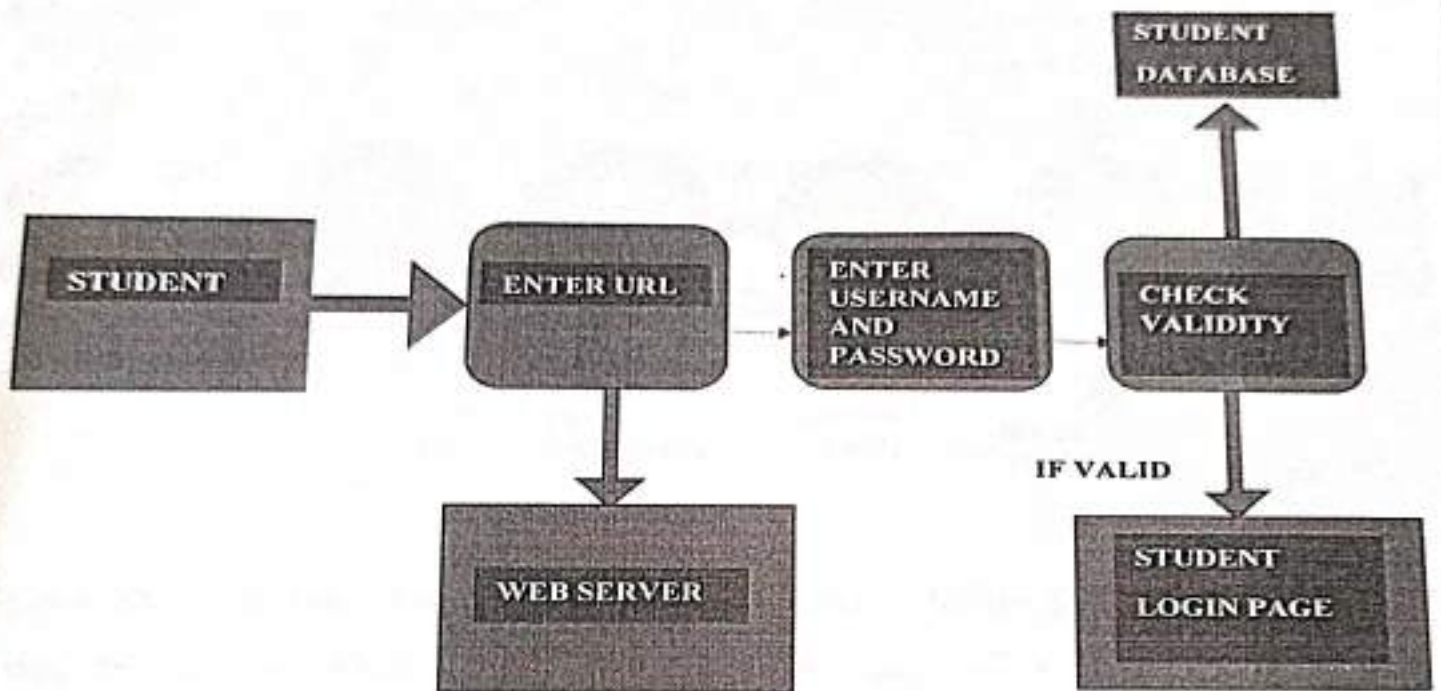

### 3.2 Data Flow Diagrams:

#### Data Flow Diagram for Teacher Login

After entering to the home page of the website, teacher can choose the **TEACHER LOGIN** option where they are asked to enter username & password, and if he/she is a valid user then a teacher login page will be displayed.

**Data Flow Diagram for Student Login :**

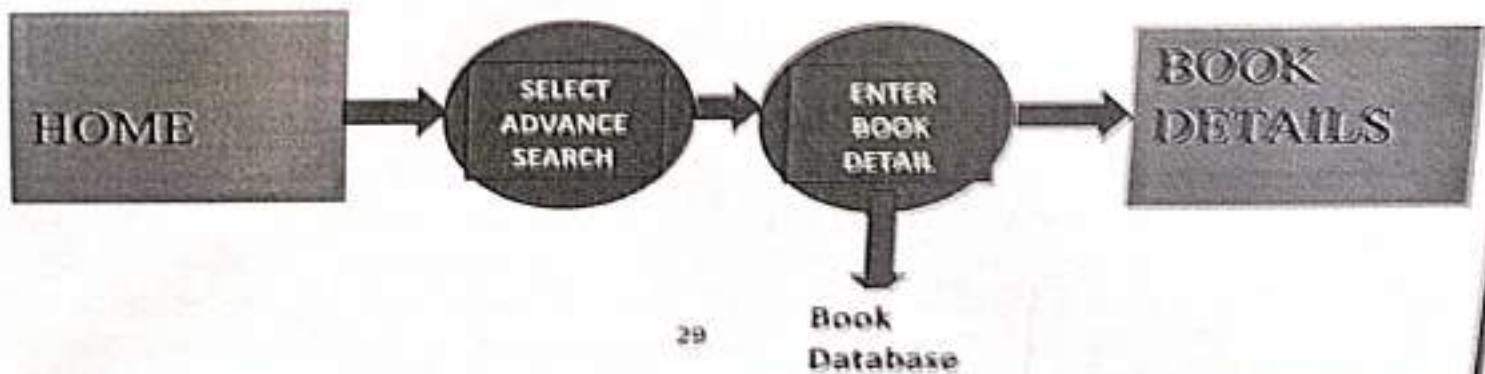

After entering to the home page of the website, student can choose the STUDENT LOGIN option where they are asked to enter username & password, and if he/she is a valid user then a student login page will be displayed.

**Data Flow Diagram for Book Issue :**

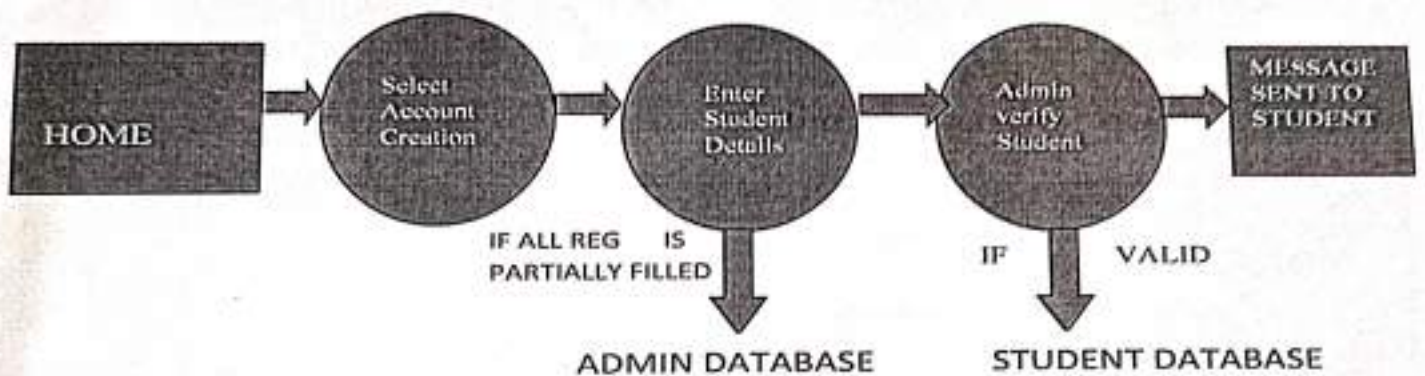

It is a 2nd level Data Flow Diagram where after entering STUDENT LOGIN page he/she can select a book issue option where after entering the book detail, he/she can select the book issue option and if the maximum no of books issued limit is not crossed then a request will be sent to the librarian who will approve the book issue.

**Data Flow Diagram for Book Search :**

After the home page login there will be an option of the book search where after entering book detail like author name, publication, book name etc book details will be displayed.

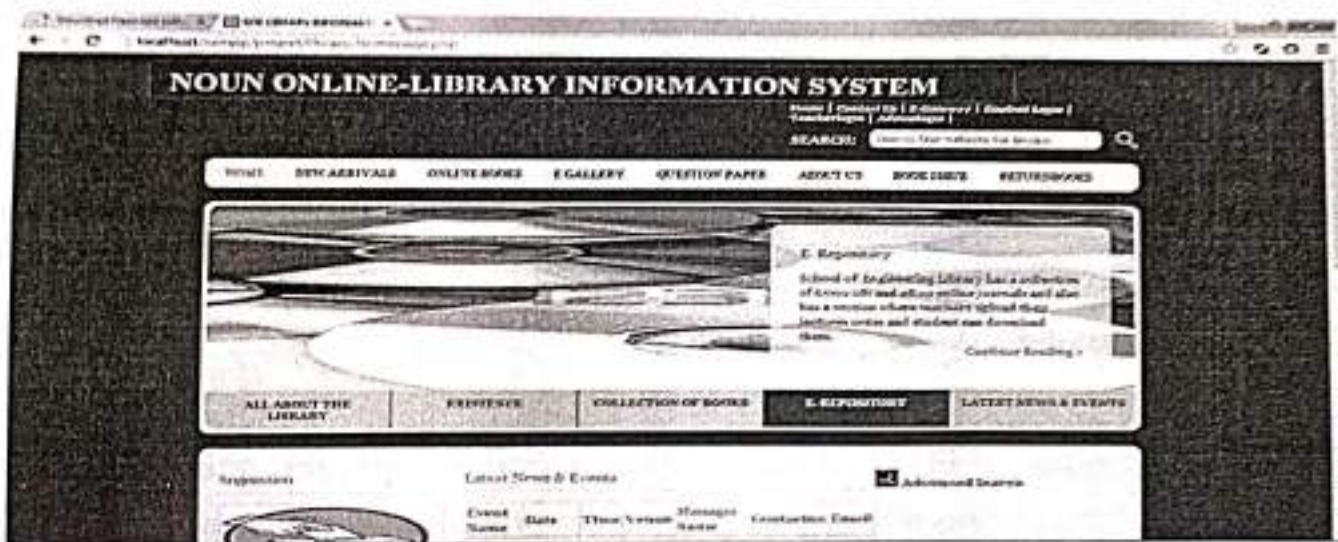

**Data Flow Diagram for Account Creation :**

After the home page login there will be an option of CREATE AN ACCOUNT where after entering student detail, if all the fields are filled then a request will be sent to the librarian who will approve him as a registered member of the library.

## CHAPTER 4 SYSTEM DESIGN AND IMPLEMENTATION

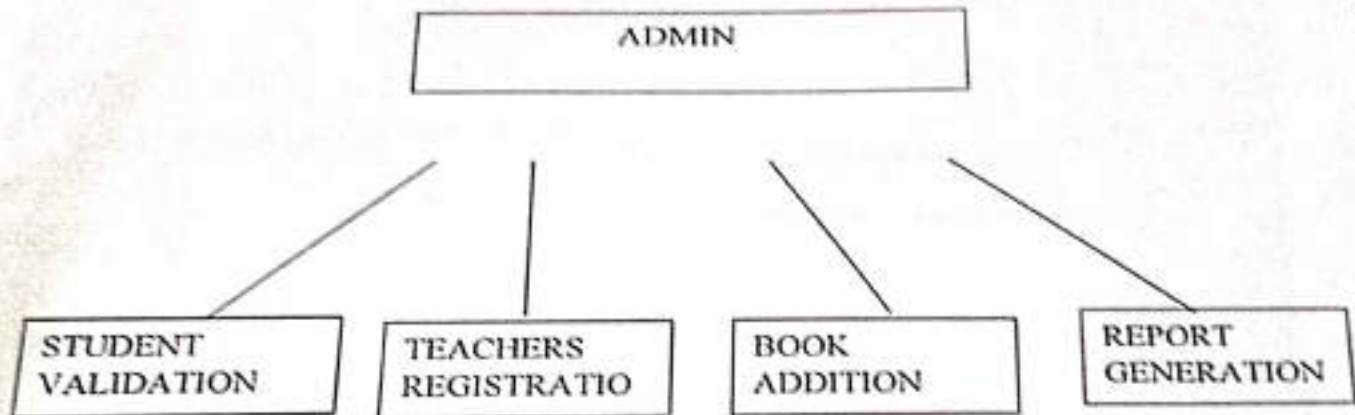

### 4.1 Screenshot for homepage :

#### 4.1.1 MODULE DESCRIPTION :

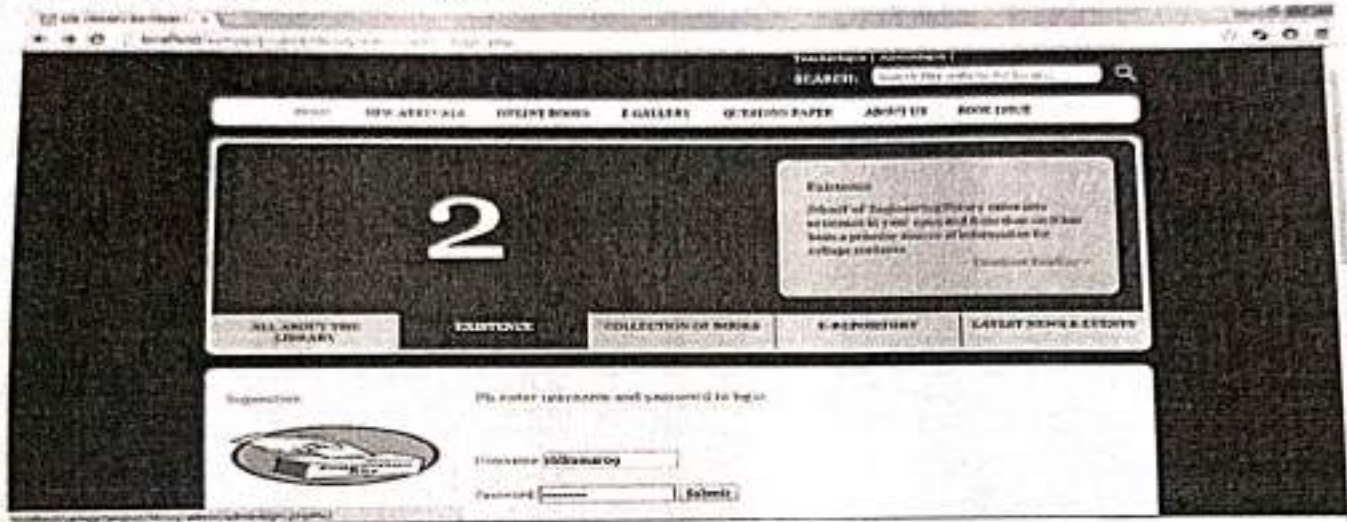

For Library Management System it is divided into the following Modules:

#### 4.1.2 Admin Module :

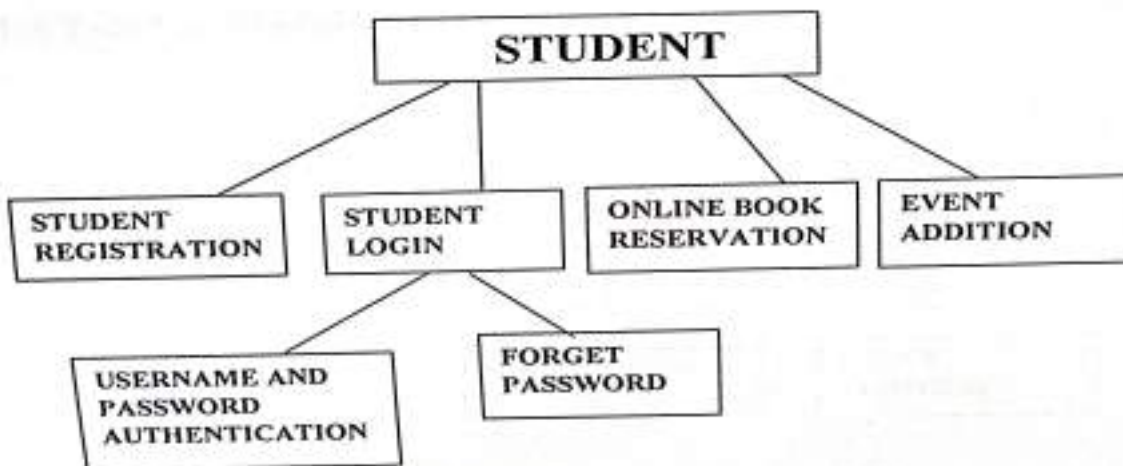

The following module contains various facilities like student validation, teacher registration, book addition, and report generation.

#### 4.1.2.1 Screenshot for Admin login:

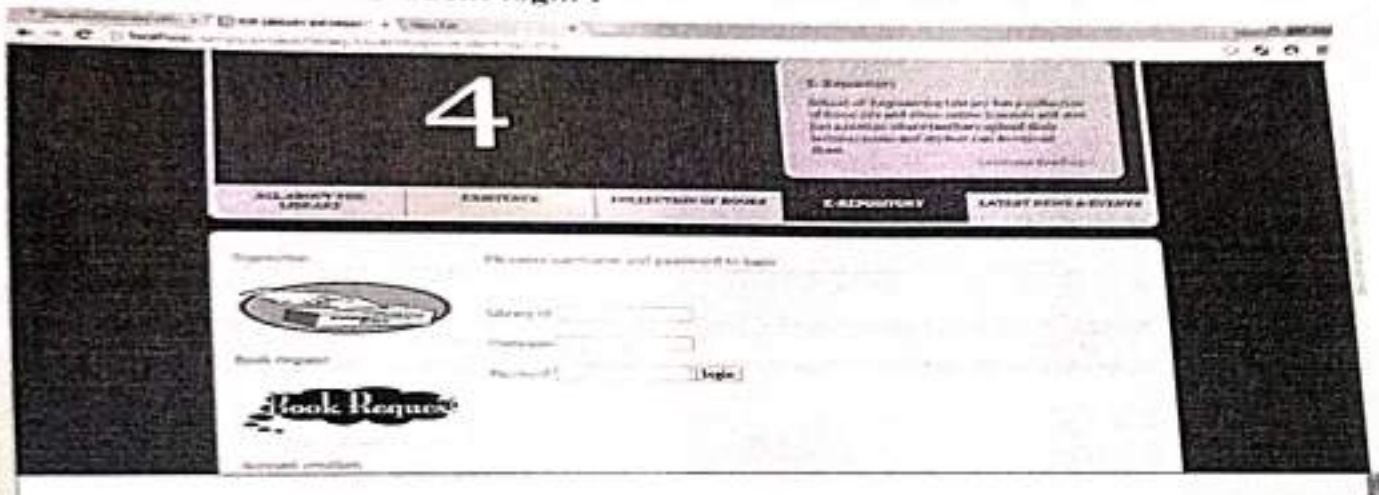

#### 4.1.3 Student Module:

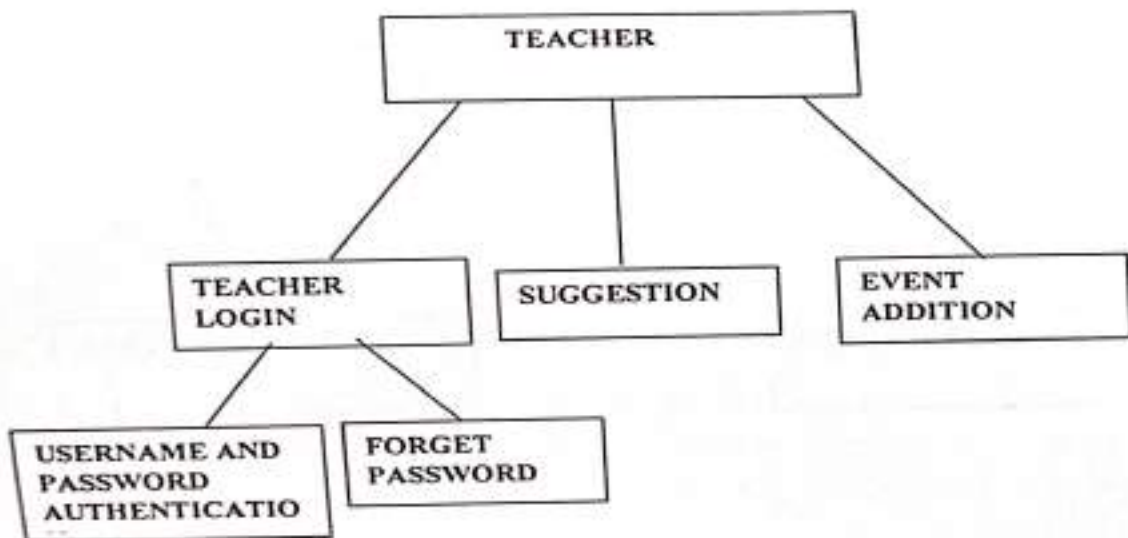

The following module contains various facilities like student registration, student login, online book reservation, and event addition. Any student if at any moment forgets his password he can retrieve it from forgot password option.

#### 4.1.3.2 Screenshot for Student login :

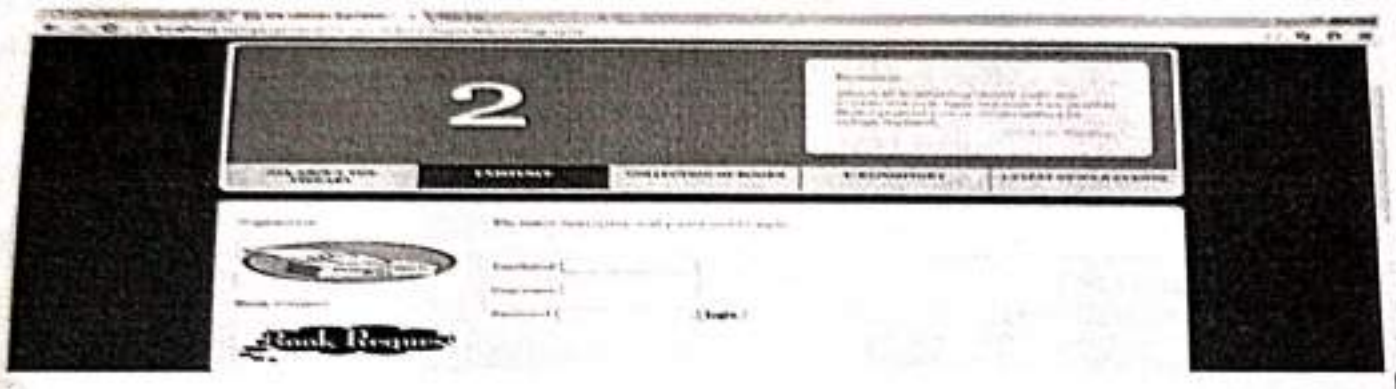

#### 4.1.4 Teacher Module :

The following module contains various facilities like teacher login, suggestions, and event addition. Further any teacher if at any moment forgets his/her password he/she can retrieve it from 'forgot password' option.

#### 4.1.4.3 Screenshot for teacher's login :

#### • 4.1.5 Book Module :

The following module contains various facilities like add new book and search book. In the 'add new book' section if any new book comes in the library then the librarian can add its specifications. Similarly if the user wants to search for a specific book then he/she can use search book option to do it.

- **4.1.5.4 Book Transaction Module :**

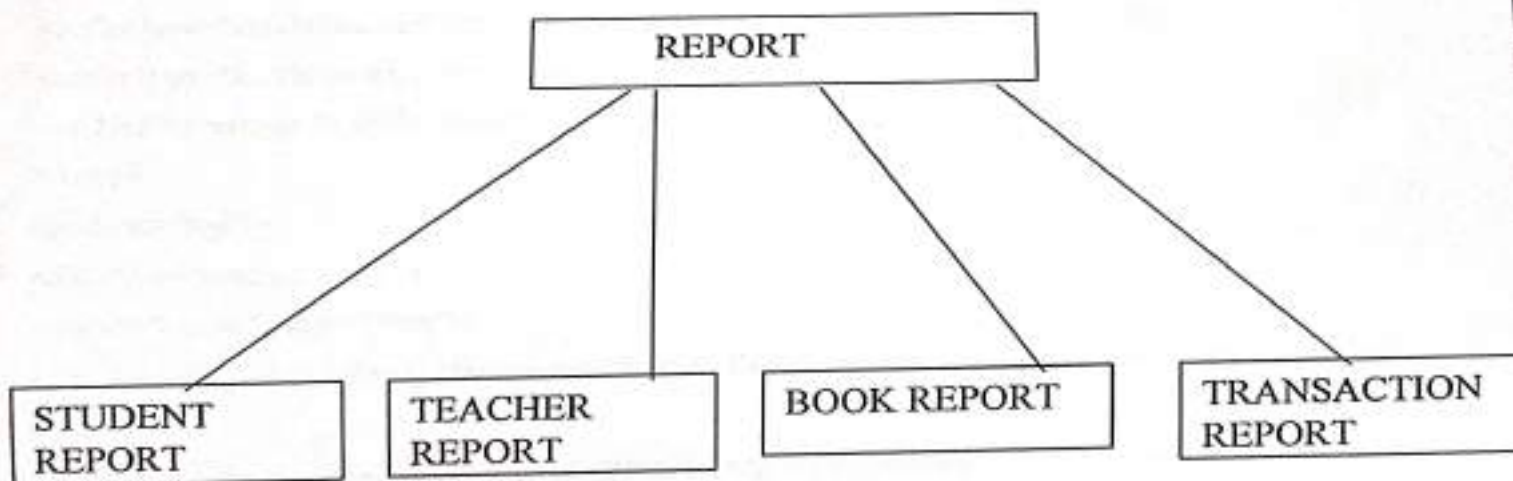

The following module contains various facilities like issue book, return book and check reservation.

#### 4.1.5.4 Screenshot for Book search :

#### 4.1.6 Report Module :

The following module contains various facilities like student report, teacher report, book report, and transaction report.

## CHAPTER 5 CONCLUSION

### 5.1 Summary :

This website (Online Library) provides a computerized version of library management system which will benefit the students as well as the staff of the library.

It makes entire process online where student can search books; staff can generate reports and do book transactions. It also has a facility for student login where student can login and can see status of books issued as well request for book or give some suggestions. It has a facility of teacher's login where teachers can add lectures notes and also give necessary suggestion to library and also add info about workshops or events happening in our college or nearby college in the online notice board.

There is a future scope of this facility that many more features such as online lectures video tutorials can be added by teachers as well as online assignments submission facility, a feature

Of group chat where students can discuss various issues of engineering can be added to this project thus making it more interactive more user friendly and project which fulfills each users need in the best way possible.

## **5.2 Conclusion :**

The aim of the system testing process was to determine all defects in our project .The program was subjected to a set of test inputs and various observations were made and based on these observations it will be decided whether the program behaves as expected or not.

Our Project went through two levels of testing

1. Unit testing
2. Integration testing

## REFERENCES

- **Adamson (2008)** An integrated library system, also known as a library management system is an enterprise resource planning system for a library, used to track items owned, orders made, bills paid, and users who have borrowed.
- **Ademodi&Adepoju, (2009)** investigated the computer skill among librarians in academic libraries on Ondo and Ekiti State in Nigeria.
- **Ashutosh&Ashish, (2012)** the Online-Library Information System is an Online-Library platform mostly used for monitoring and controlling the transactions in a library.
- **Johnson, (2007)** explained more about library and information science education in developing countries.
- **Rahman, Khatun and Islam, (2008)** reviewed the library education in Bangladesh.
- **Rasmus Lerdorf (1995)** the reference implementation of PHP is now produced by The PHP Group.
- **Nepal, Siwakoti, (2008)** found that there was no government agency to control, monitor and evaluate the school libraries activities.

## ACKNOWLEDGEMENT

We are thankful to our Principal, Dr. D.RatnagiriUsha M.A, M.Phil, Ph.D for her permission to select this project and for her continuous encouragement and valuable suggestions.

We are also thankful to our Head of the Department SmtN.NagaSubrahmanyeswariM.Tech(Ph.D) for her continuous and constant motivation towards completion of this project.

We wish to express our gratitude to our faculty and Project Guide G.SatyaSuneethafor her timely suggestions and encouragement.
