Brief report of the activity	<p>"Nutritional assessment can be defined as the interpretation from dietary, laboratory, anthropometric, and clinical studies. It is used to determine the nutritional status of individual or population groups as influenced by the intake and utilization of nutrients". Nutritional status represents meeting of human body needs for nutritive and protective substances and the reflection of these in physical, physiological, and biochemical characteristics, functional capability, and health status. Information about nutritional status, i.e., nutritional assessments, is essential for identification of potential critical nutrients (at population groups at risk of deficiency); formulation of recommendations for nutrient intake; development of effective public health nutrition (PHN) program for nutrition-related diseases prevention. Hence, the present activity is undertaken to give demonstration on nutritional anthropometry, clinical and morbidity assessment.</p>
