## **Objective of the Debate:**

The main objective of conducting this debate was to encourage young women to critically analyze the societal expectations placed on them and reflect on whether a balance between career, family, and personal life is truly achievable. The aim was also to empower students to express their views on gender equality, work–life balance, career aspirations, and the evolving role of women in modern society.

## **Participants:**

The debate saw active participation from girl students. They presented diverse viewpoints based on social realities, personal aspirations, and observed experiences of women in families and workplaces.

## **Summary of Views Presented by the Participants:**

### **1. Views Supporting the Statement (Yes, Women Can Have It All):**

- With increasing educational opportunities, women today are more capable and confident in pursuing high-level careers while managing family responsibilities.
- Support systems like parental help, childcare facilities, flexible work hours, and technological advancements make multitasking more manageable for women.
- Many participants cited examples of successful women leaders, entrepreneurs, scientists, and professionals who balance personal and professional roles effectively.
- They emphasized that planning, time management, and equal partnership in marriage play a crucial role in achieving balance.

### **2. Views Opposing the Statement (Challenges to Having It All):**

- Some participants argued that societal expectations still place the majority of household and childcare responsibilities on women, making it difficult to “have it all” without significant personal sacrifice.
- They highlighted issues like workplace bias, lack of supportive family structures, and mental stress that women often experience when juggling multiple roles.
- Participants also pointed out that the idea of “having it all” may be unrealistic unless systemic changes—such as equitable domestic division of labor and better maternity policies—are ensured.

### 3. Balanced or Neutral Views:

- A section of participants believed that women *can* have it all, but not *all at the same time*. They suggested that life phases differ—career priorities may dominate at certain times, while family responsibilities may take precedence at others.
- They stressed redefining success not as “doing everything perfectly,” but as maintaining well-being, happiness, and personal fulfillment.

### Outcomes of the Debate:

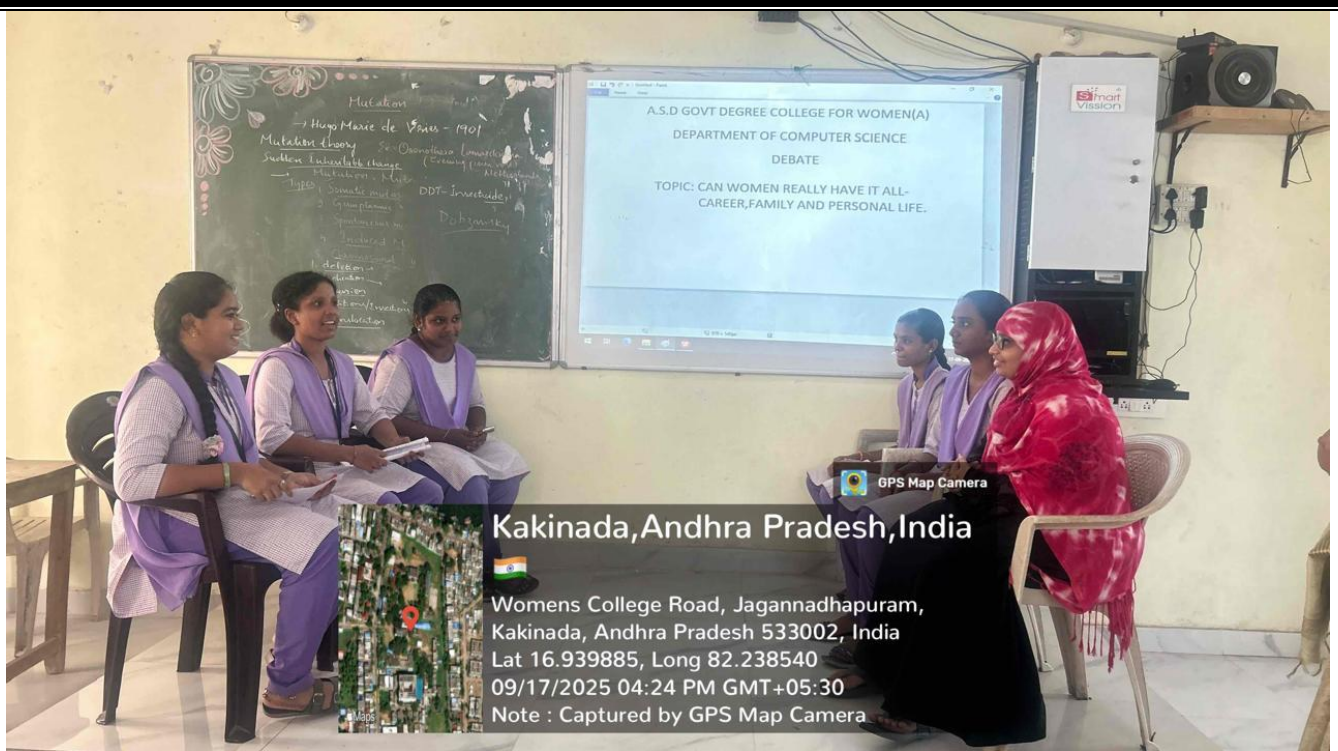

- The debate concluded that while women are increasingly breaking barriers and achieving excellence across professional and personal domains, they still face structural and societal challenges.
- The general consensus among the participants was that women *can* aspire to and achieve a fulfilling career, family life, and personal development **if** there is adequate support, shared responsibilities at home, and a shift in societal mindset.
- The debate encouraged participants to value both ambition and self-care, and to advocate for gender equality in workplaces and homes.
- The session effectively raised awareness about the importance of supportive environments and the need for policies that allow women to thrive in all spheres of life.

### Conclusion:

The debate was intellectually stimulating and empowering, allowing girl students to voice their thoughts confidently. It highlighted the evolving perspectives of young women and reinforced the importance of collective responsibility—within families, institutions, and society—to create a world where women truly *can* have it all.
